

Compressed Air and Gas Filtration Products

Catalog 1300-300-06/USA

Finite®

We are dedicated to fulfilling your compressed air filtration requirements. We know that every application requires specific needs and we have the products ready to address them.

If you can't find a specific compressed air/gas filter, dryer, or accessory in this catalog, call 1-800-521-4357. Our knowledgeable technical assistance department will be happy to assist you!

Inquires via e-mail are also encouraged. E-mail inquiries to finitefilter@parker.com. We can provide solutions that will remove contaminants such as oil, water and particulate from your compressed air and gas lines, saving you time and money!

WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application including consequences of any failure, and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Offer of Sale

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by the provisions stated in the "Offer of Sale."

BASICS OF COALESCING

Q. What is co-alescing fil-tra-tion?

co-alescing fil-tra-tion: A steady state process whereby aerosols are caused to agglomerate (come together) into even larger droplets as they pass through the filter element's fiber matrix, eventually becoming large enough to be gravitationally drained away.

Q. Why filter compressed air?

A.
Submicronic contaminants in compressed air systems can:

- plug orifices of sensitive pneumatic instrumentation
- wear out seals
- erode system components
- reduce the absorptive capacity of desiccant air/gas dehydrators
- foul heat transfer surfaces
- reduce air tool efficiency

The results include:

- product rejects
- lost production time
- increased maintenance costs

For example, trace amounts of submicronic oil can cause serious fish eye blemishing in automotive finishing operations. Water left in air lines can freeze during exposure to cold, blocking flow or rupturing pipes. Compressor lubricant not captured in a coalescing filter will eventually collect in pneumatic components, causing premature component repair or replacement. Environmental concerns will be raised if oily, compressed air is continually discharged into the atmosphere through a pneumatic muffler.

This filter housing cutaway depicts the coalescing process. Air enters the housing and flows through the filter media passing from the inside element surface to the outside. Coalesced liquid collects in the housing where it is drained and clean air exits the housing through the outlet port.

Have More Questions?

Request a free copy of **Finite's** Basics of Coalescing - Bulletin 1300-700/USA.

Call 1-800-521-4357 or see it online at www.finitefilter.com.

Finite's colorful, 28-page handbook is intended to familiarize the user with all aspects of coalescing filtration from the basics to advanced theory and concept.

Table of Contents

Compressed Air and Gas Filters	Pages 7-22  International H-Series (Bulletin 1300-993C/USA) • Coalescing, particulate and adsorption • Pressures to 500 PSIG • Connections from 1/4" to 3" NPT, BSPF & BSPT • Flows from 10 to 1600 SCFM	Pages 23-34  ASME Coded Vessels (Bulletin 1300-400/USA) • Coalescing, particulate and adsorption • Pressures to 185 PSIG • Connections from 3" NPT to 16" flange • Flows up to 37,000 SCFM
	Pages 35-38  Dual Stage BA-Series (Bulletin 1300-905/USA) • Coalescer/adsorber combination unit • Pressures to 500 PSIG • Connections from 1/4" to 1" NPT • Flows up to 75 SCFM	Pages 39-46  Micro-Series (Bulletin 1300-450/USA) • PTFE Membrane elements • 316 Stainless steel housings • Connections from 1" NPT to 6" flange • 0.01 Micron absolute
High Pressure & CNG Filters	Pages 63-90  High Pressure Filters (Bulletin 1300-997/USA) • CNG and alternative fuel filters • Pressures to 6000 PSIG • Ductile iron, stainless steel and aluminum housings • Variety of filter medias available	Pages 72-73  M-Series • Pressures to 800 PSIG • Connections from 1/2" to 2" NPT, BSPT & BSPF • Use with specialty gases • Variety of filter medias available
	Pages 80-82  J-Series • CNG, alternative fuel and breathing air filters • Pressures to 5000 PSIG • Ductile iron and nodular cast iron • Coalescing, particulate and adsorption	Page 88  High Pressure Drains • Safely drain condensate • Pressures to 6000 PSIG • Directly connect to J-Series and SJ-Series • Drain contaminants at pressure
Dryers	Pages 131-134  FDD Desiccant Dryers (Bulletin 1300-850/USA) • For point-of-use and OEM applications • Pressure dewpoints down to -40° F • Connections from 1/4" to 1" NPT • Ideal for intermittent flows	Pages 135-140  Membrane Dryers (Bulletin 1300-800/USA) • Compressed air hollow fiber membrane dryers • Dewpoints as low as -40°F • Connections from 1/4" to 1/2" NPT • Flows up to 40 SCFM
Accessories	Pages 181-185  Accessories (Bulletin 1300-150/USA) • Differential pressure gauges • Float, solenoid and zero air loss drains • Mounting brackets and adapter kits • Find out where these accessories are used	Page 186  Oil/Water Indicators (Bulletin 1300-650/USA) • Disposable indicator detects oil or water • Element changes to red to indicate • Connection: 1/8" NPT • Replacement elements available
	Pages 187-188  Zero Loss Drain (Bulletin 1300-350/USA) • Conserve energy • Connection: 1/2" NPT • Pressure range: 12 - 250 PSIG • Adjusts to all common power sources	Pages 189-190  Drip Legs (Bulletin 1300-155/USA) • Remove liquid contamination at pressure • Available with various drain options • Provides additional sump capacity • Pressures to 250 PSIG

Pages 47-60

Instrumentation and Gas Sampling Filters (Bulletin 1300-694/USA)

- Stainless steel, aluminum & plastic housings
- Clear bowls available
- Connections from 1/8" to 2" NPT
- Pressures to 5000 PSIG

Page 58

Disposable in-line filters

- Point-of-use filters
- Pressures to 100 PSIG
- Standard hose connections
- Hosebarb options available

Pages 61-62

Steam Filter (Bulletin 1300-250/USA)

- Produce high quality steam
- Pressures to 125 PSIG
- Connection: 1" NPT
- Max. flow rate: 400lbs/hr

Instrumentation and Steam Filter

Pages 91-116

Filter, Lubricator, Regulator (Bulletin 1300-703-3/USA)

- Two and three unit combos
- Metal and polycarbonate bowls available
- Pressures to 250 PSIG
- Connections from 1/8" to 1 1/2" NPT

Pages 117-124

Stainless Steel FRL (Bulletin 1300-775/USA)

- 316 Stainless steel housings
- Pressures to 300 PSIG
- Connections from 1/4" to 1/2" NPT
- Ideal for corrosive environments

Pages 125-126

Exhaust Coalescing Silencer (Bulletin 1300-993C)

- Eliminates oil mist from pneumatic Exhaust
- Removable sump collects oil
- Connections: 1/2" & 1" NPT
- 25 dBA Noise attenuation

Pages 127-130

Vacuum Pump Exhaust Filters (Bulletin 1300-310/USA)

- Eliminate 99.9% oil mist and smoke
- Easily adapts to most vacuum pumps
- Connections from 1/2" to 3" NPT
- Flows to 200 CFM

FRL's & Vacuum Exhaust Filters

Pages 141-180

Par-Fit Conversion Elements (Bulletin 1300-500-1/USA)

- Coalescing, particulate and adsorption
- Offers UNI-cast Finite advantage
- Over 2500 interchanges available

Par-Fit Conversion Elements

Pages 191-192

Finite Sizing Equation (Bulletin 1300-QRG-1)

- Learn how to find the correct size H-Series or ASME filter for your application
- All you need to know is your application's flow rate, operating pressure and temperature

Page 193

Finite Gas Compatibility Chart (Bulletin 1300-QRG-2)

- Learn which gases are compatible with Finite's different product lines
- Finite filters can be used for specialty gases such as nitrogen and methane

Page 195 About Parker Hannifin Corporation

Technical Information

Facts and Conversions:

Pressure:

1 bar = 14.5 pounds per square inch (PSI)
1 PSI = 27.686 inches of water (H₂O)
1 PSI = 2.036 inches of Mercury (Hg)

Temperature:

32°Fahrenheit = 0° Celcius
°C = (°F-32)5/9

Length:

1000 millimeters = 100 centimeters = 1 meter
1 meter = 39.27 inches = 3.281 feet
1 foot = 30.48 centimeters
1 inch = 2.54 centimeters
1 micron (μm) = 10⁻⁶ meters = one millionth of a meter
25.4 μm = .001 inch

Volumetric Flow Rate:

1 cubic meter per second (m³/s) = 2118.9 feet cubed per minute (ft³/min)
1 ft³/_{min} = 28.3 liters/_{min}
1 cubic meter per hour (m³/hr) = 1.7 standard cubic feet per minute

Mass:

1 pound = 453.59 grams = 0.45359 kilograms
1 pound = 16 ounces
1 ounce = 28.349 grams

Density:

$$\text{Density} = \frac{\text{Mass (m)}}{\text{Volume (V)}}$$

International H-Series

Compressed Air & Gas Filters

- Coalescing, Particulate & Hydrocarbon Adsorption
- Flows from 10 to 1600 SCFM (17 to 2822 m³/hr)
- 1/4" to 3" NPT, BSPF & BSPT Ports

Compressed Air
and Gas Filters

Bulletin 1300 - 993C/USA

Finite®

Do you have... product rejects? Increased maintenance expense?

Contaminants from your compressor going into point of use applications?

Why filter compressed air and gas?

Submicronic contaminants in compressed air systems plug orifices of sensitive pneumatic instrumentation, wear out seals, erode system components, reduce the absorptive capacity of desiccant air/gas dehydrators, foul heat transfer surfaces, reduce air tool efficiency, and damage finished

products. The results include product rejects, lost production time and increased maintenance expense.

For example, trace amounts of submicronic oil can cause serious fish eye blemishing in automotive finishing operations. Water left in air lines can freeze during exposure to cold temperatures, blocking flow

or rupturing pipes. Compressor lubricant not captured in a coalescing filter will eventually collect in pneumatic components, causing premature component repair or replacement. Environmental concerns will be raised if oily, compressed air is continually discharged into the atmosphere

Why use Finite Filters?

SAVE TIME AND MONEY

Finite Filter's International H-Series is the right solution for most compressed air/gas applications. Our filter elements are formed with our special UNI-CAST glass microfibers to enhance the depth-loading characteristics of each element's fiber matrix. This design provides lower pressure drops and less frequent change outs, saving you time and money.

WE MEET YOUR NEEDS

With our wide variety of media, you can find a product to meet your specific requirements. This will avoid over-specifying filtration efficiency.

IMPROVE OPERATION LIFE

We make liberal use of a special prefilter, prolonging operation life on some coalescers from 4 to 6 times.

CONFIDENCE IN PERFORMANCE

Our filter housings have been specifically designed for coalescing filtration. Generous exit ports promote lower pressure drops and large remote sump areas prevent fluid re-entrainment. With Finite's H-Series product line, you can have confidence in performance.

Finite's H-Series Offers...

- Coalescing, particulate and adsorption filter elements
- Optional indicators, gauges and drains
- Temperatures to 450° F (232° C)
- Pressures to 500 PSIG (34 bar)
- Connection sizes from 1/4" to 3" NPT, BSPF & BSPT
- Flows from 10 to 1600 SCFM (17-2822 m³/hr)

oil

water

solids

Actual pictomicrograph of particulate contaminants
(Magnified 100x Scale: 1 division = 20 microns (µm))

The contaminants of greatest concern in precision compressed air systems are water, oil and solids. Water vapor is present in all compressed air; it becomes greatly concentrated by the compression process. While air dryer systems can be used effectively to remove water from compressed air, they will not remove the second major liquid contaminant – oil. Most oil comes from compressor lubrication carry-over, but even

the air produced by oil-free compressors has hydrocarbon contamination brought into the system through the intake.

The third contaminant found in compressed air is solid matter including dirt, rust and scale. Solid particulates, combined with aerosols of water and oil, can clog and shorten the life of air system components and can foul processes.

Typical Applications

(See Pages 10-11 for application and air cleanliness schematics)

Coalescing (Oil Removal)

- Air dryer prefilter
- Paint spray booths
- Breathing air
- Tool protection
- Air valve protection
- Air cylinder protection
- Compressed air system protection

Adsorber (Vapor Removal)

- Odor removal
- Breathing air
- Food packaging equipment
- High purity laboratory gases
- Hydrocarbon vapor removal

Interceptor (Particulate Removal)

- Desiccant dryer afterfilter
- Prefilter for coalescer
- Systems with high concentrations of solid contaminant
- Particulate protection for non-lubricated systems

4 Steps to clean, dry compressed air!

Compressed Air and Gas Filters

Step 1

Determine your application, media grade, media type and end seals.
Pages 10-13

Step 2

Choose your housing and replacement elements.
Pages 14

Step 3

Choose your accessories. Find out what's standard or choose what's best for your application.
Page 15

Step 4

How to Order. Build your own part number here!
Page 16

Does one of these

applications

describe your system?

From aeration in pharmaceutical and chemical processes to pneumatic power systems, the possibilities for applications are endless. Finite has some suggested air cleanliness standards that may fit your needs. Let one of Finite's application engineers find a system that is right for you.

quality

International Standard ISO8573-1 is fast becoming the industry standard method for specifying compressed air cleanliness. The following diagrams describe various systems in terms of their corresponding ISO classification.

International ISO Standards

Notification as specified in ISO8573 - 1

Class	Solid		Water		Oil	
	Maximum particle size	Maximum Concentration* ppm(mg/m ³)	Maximum Pressure Dewpoint °F (°C)		Maximum Concentration** ppm(mg/m ³)	
1	0.1	0.08 (0.1)	-94 (-70)		0.008 (0.01)	
2	1	0.8 (1)	-40 (-20)		0.08 (0.1)	
3	5	4.2 (5)	-4 (-20)		0.83 (1)	
4	15	6.7 (8)	37 (+3)		4.2 (5)	
5	40	8.3 (10)	45 (+7)		21 (25)	
6	-	-	50 (+10)		-	-

* At 14.7 psi (1 bar) absolute pressure, +70°F (+20°C) and a relative humidity of 60%. It should be noted that at pressures above atmospheric, the contaminant concentration is higher.

Notes:

1. The quality of the air delivered by non-lubricated compressors is influenced by the quality of the intake air and the compressor design.

ISO Class 2 3

Any compressor with aftercooler. Air intended for use with lubricated air tools, air motors, cylinders, shot blasting, non-frictional valves.

OTHER SPECS MET: Compressed Air & Gas Institute: CGA – G7.1 (Grades A & Ba1)

ISO Class 1 1

Any compressor with aftercooler and 2-stage coalescing. Air intended for use with lubricated control valves, cylinders and parts blow-down, etc.

OTHER SPECS MET: Mil. Std. 282 H.E.P.A., U.S.P.H.S. 3A Accepted particles for milk

ISO Class 1 1

Compressor Room (Source) Air Preparation Equipment:

Point-Of-Use Air Preparation Equipment:

Any compressor with aftercooler, 2-stage coalescing and deliquescent dryer. Air intended for use with general pneumatic systems, body shop spray painting and components sensitive to high moisture content.

OTHER SPECS MET: Compressed Air & Gas Institute: CGA – G7.1 (Grade C)

Compressor Room (Source)
Air Preparation Equipment:

Point-Of-Use
Air Preparation Equipment:

Any compressor with aftercooler, 2-stage coalescing and refrigerated dryer. Air intended for use with air-gauging, air conveyors, spray-painting, food processing, instrumentation, blow molding, cosmetics, film processing, bottling, pharmaceuticals, dairy, breweries, medical, robotics and close tolerance valves.

SPECS MET: CGA – G7.1 (Grades D & E), ISAS7.3 Fed. Std. 209 (Class 100)

ISO Class 1 4 1

Compressor Room (Source)
Air Preparation Equipment:

Point-Of-Use
Air Preparation Equipment:

Any compressor with aftercooler, 2-stage coalescing, refrigerated dryer and carbon absorber. Air intended for use as industrial breathing air and decompression chambers. CAUTION: Always use high temperature synthetic lubricants and monitor (alarm for carbon monoxide concentrations exceeding 20ppm). This system will not eliminate toxic gases!

OTHER SPECS MET: O.S.H.A. 29CFR 1910.134

ISO Class 1 2 1

Compressor Room (Source)
Air Preparation Equipment:

Point-Of-Use
Air Preparation Equipment:

Any compressor with aftercooler, two-stage and double coalescing and a regenerative-type desiccant dryer. Air intended for use in applications involving rapid expansion of compressed air, critical instrumentation, high purity gases, computer chip drying, etc. CAUTION: This air is too dry for respiratory use.

SPECS MET: CGA – G7.1 (Grade F)

Step 1

Determine your application, media grade, media type and end seals.

Find your (or similar) application in the descriptions below, from the basic application circuits on the previous page, or consult a **Finite**® application engineer. Determine media grade, media type and end seal required. If your application requires a coalescing element, use the information listed below. For other media types, please see the following page.

Coalescing (Liquid and Particulate Removal) Filter Media

How does a coalescer work?

This filter housing cutaway depicts the coalescing process. Air enters the housing and flows through the filter media passing from the inside element surface to the outside. Coalesced liquid (water and oil) collects in the bowl where it is drained and clean air exits the housing through the outlet port. Particulate contaminants are captured and held in the media.

Choose your media type

All of the elements below flow in to out.

C: Micro-glass coalescer
Max. temp. 175°F.

Q: Micro-glass coalescer with built-in pleated prefilter
Max. temp. 175°F.

7CVP: Micro-glass pleated coalescer
Max. temp. 175°F.

D: High temperature micro-glass coalescer
Max. temp. 450°F

Media Grade
Media Type
End Seal
4 ☐ ☐

Coalescing elements are wrapped in color netting corresponding to media grades below, or will have the media grade printed on the element.

APPLICATIONS: Very high-efficiency coalescer; for elevated pressures up to **500 PSIG** (34 bar) or when removing aerosols from lighter weight gases. Protection of pneumatic systems and critical modulating systems such as flow and temperature controllers.

STANDARD

6 ☐ ☐

APPLICATIONS: General air coalescing applications when total removal of liquid aerosols and suspended fines is required in all pressure ranges. Protection of air dryers, air gauging, air logic, modulating systems, critical air conveying, most breathing air systems, etc.

7CVP

APPLICATIONS: High efficiency and very low pressure drop, even when wetted by oil and water, makes this pleated coalescing media an excellent choice for medium efficiency applications. Large surface area means long life and a high tolerance for heavy liquid aerosol contamination. Prefilter for refrigerated air dryer.

8 ☐ ☐

APPLICATIONS: Good air coalescing efficiency in combination with high flow rate and long element life. Protection of noncritical circuit components such as valves, cylinders, etc. Prefilter for refrigerated air dryer.

10 ☐ ☐

APPLICATIONS: Precoalescer or prefilter for Grade 6 to remove gross amounts of water and oil, or tenacious aerosols which are difficult to remove. Upgrading existing particulate equipment to coalescing without increase in pressure drop.

Media Specifications

Grade Designation	Coalescing Efficiency .3 to .6 Micron Particles	Maximum Oil Carryover ¹ PPM w/w	Micron Rating	Pressure Drop (PSID) @ Rated Flow ²	
				Media Dry	Media Wet With 10-20 wt. oil
4	99.995%	0.003	0.01	1.25	3-4
6	99.97%	0.008	0.01	1.0	2-3
7	99.5%	0.09	0.5	0.25	0.5 - 0.7
8	98.5%	0.2	0.5	0.5	1-1.5
10	95%	0.85	1.0	0.5	0.5

¹Tested per ADF-400 at 40 ppm inlet.

²Add dry + wet for total pressure drop.

Coalescer End Seals:

Blank: No end seals - Elements are self-sealing.

Standard on filters with 1/4" to 1" connection sizes.

U: Molded urethane, Standard on all filters with 1 1/4" to 3" connection sizes.

S: Molded silicone rubber end seals used for high-temperature elements up to **450°F** (232°C).

V: Fluorocarbon gasket bonded to metal end cap. Optional seal used for high temperature **450°F** (232°C) elements. Available on 1 1/4" NPT and larger. Standard on all 7CVP media.

Water Separator Filter Media

Grade Designation	Filter Efficiency Rating	Pressure Drop (PSID) @ Rated Flow Media Dry
100WS	100µm	<0.25

Water Separator End Seals:

Blank: Fluorocarbon gasket bonded to metal end cap. Standard on filters with 1 1/4" to 3" connection sizes.

U: Molded urethane. Standard on all filters with 1/4" to 1" connection sizes.

100WS

APPLICATIONS: Reduction and elimination of excess liquids in gas streams. Excellent prefiltration for coalescing grades 6 and 10 when extreme quantities of liquid contaminants are present.

media type

100WS: Rolled Stainless Steel Mesh (304 SS)

Element flows in to out.
Max. temp. 175°F.

Compressed Air
and Gas Filters

Interceptor (Particulate Removal) Filter Media

How does an
interceptor
work?

This filter housing cutaway depicts an interceptor element in a housing. Air enters the housing and flows through the filter media passing from the outside of the element surface to the inside. Particles collect in the element, while clean air exits the housing through the outlet port.

3P U

APPLICATIONS: Particulate removal where very high dirt-holding capacity is required. Safety afterfilter for desiccant dryer, pore matched prefilter for coalescer or as general use for final instrument air protection.

Media Specifications

Grade Designation	Filter Efficiency Rating	Pressure Drop (PSID) @ Rated Flow Media Dry
3P	3µm	0.25

media type

3P: Pleated Cellulose

Element flows out to in.
Max. temp. 175°F.

Standard Interceptor End Seals: **U** = Molded urethane. Molded silicone rubber (S) and fluorocarbon (V) available - see How to Order on page 16.

Adsorption (Vapor Removal) Filter Media

How does an
adsorber
work?

This filter housing cutaway depicts the adsorption process. Air enters the housing and flows through the filter media passing from the outside element surface to the inside. Hydrocarbon vapors collect in the filter element, while clean air exits the housing through the outlet port.

A U

APPLICATIONS: Polishing gas stream of final trace amounts of hydrocarbon contaminants, usually 0.5 to 2 ppm inlet concentrations. Preparation for breathing air; hydrocarbon vapor removal.

Media Specifications

Grade Designation	Oil Vapor Removal Efficiency	Pressure Drop (PSID) @ Rated Flow Media Dry
A	99%+	1

media type

A: Activated Carbon

Element flows out to in.
Max. temp. 175°F.

Standard Adsorber End Seals: **U** = Molded urethane. Molded silicone rubber (S) available - see How to Order on page 16.

Step 2

Determine your Housing.

Find your desired flow rate under the appropriate media grade column. For pressures other than 100 PSIG or temperatures other than 70°F, please see Alternate Housing Selection Chart, Step 2a, on following page.

_Insert Port Type. See page 16 for options. For example: Insert "N" for an NPT Port.

Housing Selection Chart

Rated Flows: SCFM @ 100 PSIG (m³/hr @ 7 bar)

For other pressures, please see Step 2a on following page.

Alternate Housing Selection Chart

for applications with pressures other than 100 PSIG and 70°F (standard conditions)

Converting Actual Application Conditions to Standardized Conditions

Because the required size of a filter is affected not only by flow, but also by operating pressure and operating temperature, it is necessary to convert those actual conditions to standardized conditions (100 PSIG and 70°F). The calculated adjusted flow rate can then be used to choose the appropriate filter in the chart on page 14. When using the chart, choose the closest flow rate from the appropriate media grade column.

Equation:

$$\begin{matrix} \text{Flow} \\ \text{Actual} \\ \text{System} \\ \text{Flow Rate} \\ \text{(SCFM)} \end{matrix} \times \begin{matrix} \text{Pressure} \\ (100 \text{ PSIG} + 14.7 \text{ PSIG}) \\ \text{(System Pressure (PSIG) + 14.7 PSIG)} \end{matrix} \times \begin{matrix} \text{Temperature} \\ (175^\circ \text{F} + 460^\circ \text{F}) \\ (70^\circ \text{F} + 460^\circ \text{F}) \end{matrix} \times \begin{matrix} \text{Specific Gravity} \\ \sqrt{\text{specific gravity}} \end{matrix} = \begin{matrix} \text{Adjusted Flow Rate} \\ \text{Adjusted Flow Rate} \\ \text{(At 100 PSIG and} \\ \text{70}^\circ \text{F)} \end{matrix}$$

Example: For grade 6C filter, with an actual flow rate of 60 SCFM, an actual pressure of 50 PSIG and an actual temperature of 175°F, the equation would go as follows:

system pressure = 50

system temperature = 175

(100PSIG + 14.7 PSIG)

(175 °F + 460°F)

(50 PSIG + 14.7 PSIG)

(70°F + 460°F)

$\frac{(114.7)}{(64.7)} = 1.77$

$\frac{(635)}{(530)} = 1.19$

Note: Take the square root of your specific gravity. If this is for a compressed air application, skip this step because the specific gravity of air equals one. Please consult **Finite**® if you do not know your specific gravity.

Now go to the chart on page 14, look down the media grade 6 column for a flow of 126.4 SCFM, you will see the correct housing is the HN4L.

60 SCFM X 1.77 X 1.19 X 1 = 126.4 SCFM

Pre-Installed Accessory Options

Step 3

Choose your accessories.

Consult **Finite**® when choosing pre-installed accessories for special gases.

P - 1/8" Differential (3/4" & up) Sensing Ports
V - Fluorocarbon O-rings
W - A + D
X - A + P
Y - A + G

Note: For max. pressures and temperatures related to **Accessories**, please see chart on previous page.

Examples on How to Order

Example 1:

HN12L-6CUY

What am I ordering?

An H-Series, with a 3" NPT connection, long bowl, standard grade 6 coalescing element with urethane end seals, an auto drain and a standard DPG gauge.

Example 2:

HN15L-8CA

What am I ordering?

An H-Series, with a 3/8" NPT connection, long bowl, grade 8 coalescing element without end seals and an auto drain.

Example 3:

HN8S-7CVPG

What am I ordering?

An H-Series, with a 2" NPT connection, standard bowl, a 7CVP coalescing element, with the standard fluorocarbon end seals and standard DPG gauge.

Example 4:

HN8E-10DVJ

What am I ordering?

An H-Series, with a 2" NPT connection, economy short bowl, grade 10 high-temp coalescing element, with the standard fluorocarbon end seals and "J" as an accessory. This high temperature option converts all materials to be capable of handling temperatures of 450°F.

Example 5:

HN2S -AUN

What am I ordering?

An H-Series, with a 1/2" NPT connection, short bowl, adsorber element, with the standard urethane end seals and no accessories.

Drawings, Dimensions & Specifications

1/4" to 1" Housings

Specifications

Max. Pressure: **500 PSIG** (34 bar)
 Safety Factor: Max. operating to burst 4:1
 Max. Temp.: **175°F** (79°C) with option to **450°F** (232°C)
 Seals: Nitrile Std./Fluorocarbon optional
 Materials: Aluminum - 380 Die cast heads;
 6061 Drawn bowls
 Coatings: Chromated heads and bowls;
 Powder painted exterior
 Design: In-line threaded bowl to head

Note: Manual Drain Port is 1/8" FNPT when
tee valve is removed from drain bushing.

Maintenance Bulletin - International H-Series

(1/4" to 1" NPT, BSPF, BSPT Sizes only)

MB-141

INSTALLATION

Finite H-Series filters should be installed in a level pipeline, mounted vertically, the bowl downward with one bowl length clearance for element removal. The filter should be installed at the highest pressure point available, and as near as possible to the equipment to be protected and have a drip leg immediately upstream. The coalescers and particulate filters should be visible and easily accessible for periodic draining and maintenance.

The filters should be piped in accordance with the instruction tags, flow arrows or "IN" and "OUT." Should these tags become unreadable, install the coalescer so that flow passes through the filter tube from inside-to-outside. Plumb particulate and adsorber filters so that flow passes through the filter from outside-to-inside. The various filter locations relative to other equipment should be as follows (unless specific instructions are given to the contrary): (1) COALESCERS and WATER SEPARATORS are placed before the dryer. (2) The INTERCEPTOR (Particulate) goes ahead of the COALESCER when pre-filtration is required. (3) The INTERCEPTOR is installed downstream of desiccant dryers to prevent desiccant migration. (4) The ADSORBER is always preceded by a COALESCER.

When Coalescer or Interceptor differential pressure reaches clogged condition (6-10 PSID) replace element immediately. DO NOT ATTEMPT TO CLEAN FILTER TUBE. System contamination can result. DO NOT ATTEMPT TO RESEAT A FILTER TUBE. New serrated indentations can be formed causing leakage. DO NOT BY-PASS THE COALESCER unless the by-pass line is also filtered.

OPERATION

Air coalescing is a continuous, balanced, steady-state process occurring at or below rated flow, which depends on two factors for high performance: (1) The bowl must be kept free of waste liquid build-up and (2) The element must be replaced when the differential pressure reaches 6-10 psid, 12 psid Maximum. Differential pressure can be sensed at the inlet and outlet ports by two gauges, or by Finite's DPI-13 differential pressure indicator, DPG-15 differential pressure gauge, or by observing system characteristics.

Bowl draining is accomplished by opening the manual drain valve (standard on all housings), at least once every 8 hours depending on the liquid load. The Finite Auto-Drain AD-12 is a useful tool that replaces manual draining. Finite's timed drain valve can be used to drain the bowl automatically.

A Finite coalescer, under normal system conditions, will operate for 6 to 12 months before reaching its Maximum differential pressure. A "PU" series Interceptor, or a "QU" series coalescing element with a pleated prefilter can be employed ahead of the coalescer to increase its life. The interceptor should be replaced when its differential pressure reaches 8 - 10 psid.

Finite coalescers are designed for nominal operation with 10-20 wt. oil. Any viscosity increase over that of 20 wt. oil must be offset by a proportionate oversizing of the filter element. Consult your Finite representative.

TROUBLESHOOTING CHART

Problem	Probable Cause	Solution
Too High Initial Pressure Drop	Air flow Excessive for housing size. Filter media grade too fine.	Install larger filter. Install coarser element.
	Too much oil/water from compressor.	Pre-coalesce with grade 10 - oversize housing.
Premature Clogging (Air Flow Drops Off)	Lubricant improperly selected for compressor, causing varnish or carbonizing of lubricant.	Change oil, consult with lubricant supplier.
	Excessive inlet particulate contamination.	Prefilter with Interceptor.
	Excessive lubricants present on element caused by either high lubricant viscosity or very high inlet aerosol level.	Prefilter with Grade 10 and oversize coalescer to compensate.
	Oil/water emulsion forming on element.	Remove water by drip leg, aftercooler. Install mechanical separator upstream.
Oil Present Downstream of Filter	Ice forming or oil viscosity too high due to Excessively low unit temperature.	Raise temperature.
	Bowl not properly drained of waste liquids.	Drain regularly, use auto drain.
	Element not sealing.	Replace element.
	Filter piped backwards.	See "INSTALLATION"; Re-pipe.
	Filter being by-passed by valving.	Close valve.
	Contaminated air entering system from second source downstream.	Change pipe or relocate filter.
	Oil vapors condensing downstream.	Install an adsorber.
	Excessive inlet oil level.	Precoalesce with Grade 10 and possibly oversize.
	Element damaged, chemically attacked or not installed in housing.	Change and consult distributor or factory for other than neutral pH.
	Oil present in pre-contaminated downstream piping.	Clean piping.
	Excessive flow surges.	Relocate filter, pre-coalesce with grade 10 and oversize coalescers.

MB-143

INSTALLATION

Finite H-Series filters should be installed in a level pipeline, mounted vertically, the bowl downward with one bowl length clearance for element removal. The filter should be installed at the highest pressure point available, and as near as possible to the equipment to be protected and have a drip leg immediately upstream. The coalescers and particulate filters should be visible and easily accessible for periodic draining and maintenance. Filters should be piped according to these instructions also following the flow direction label on the filters.

Filters up to and including 2" connection sizes flow as follows:

Coalescers/WS: from port 1 to port 2

Interceptors: from port 2 to port 1

Adsorbers: from port 2 to port 1.

Filters with connection sizes 2 1/2" and 3" flow as follows:

Coalescers/WS: from port 1 to port 2

Interceptors: from port 1 to port 2

Adsorbers: from port 1 to port 2.

The following are recommended filter locations relative to other compressed air equipment (unless specific instructions are given to the contrary):

- (1) COALESCERS and WATER SEPARATORS (WS) (liquid removal) are placed before the dryer.
- (2) The INTERCEPTOR (particulate removal) should be installed ahead of the COALESCER when prefiltration is required.
- (3) The INTERCEPTOR (particulate removal) can also be installed downstream of desiccant dryers to prevent desiccant migration.
- (4) The ADSORBER (vapor removal) is always preceded by a COALESCER.

When Coalescer or Interceptor differential pressure reaches clogged condition (6-10 PSID) replace element immediately. DO NOT ATTEMPT TO CLEAN FILTER TUBE. System contamination can result. DO NOT BY-PASS THE COALESCER unless the by-pass line is also filtered.

OPERATION

Air coalescing is a continuous, balanced, steady-state process occurring at or below rated flow, which depends on two factors for high performance: (1) The bowl must be kept free of waste liquid buildup and (2) The element must be replaced when the differential pressure reaches 6-10 psid, 12 psid Maximum. Differential pressure can be sensed at the inlet and outlet ports by two gauges, or by Finite's DPI-13 differential pressure indicator, DPG-15 differential pressure gage, or by observing system characteristics.

Bowl draining is accomplished by opening the manual drain valve (standard on all housings), at least once every 8 hours depending on the liquid load. The Finite Auto-Drain AD-12 is a useful tool that replaces manual draining. Finite has an assortment of electrically timed drain valves that can be used to drain the bowl automatically.

A Finite coalescer, under normal system conditions, will operate for 6 to 12 months before reaching its Maximum differential pressure. A "PU" series Interceptor, or a "QU" series coalescing element with a pleated prefilter can be employed ahead of the coalescer to increase its life. The interceptor should be replaced when its differential pressure reaches 8 - 10 PSID.

Finite coalescers are designed for nominal operation with 10-20 wt. oil. Any viscosity increase over that of 20 wt. oil must be offset by a proportionate oversizing of the filter element. Consult your Finite representative.

DANGER

Filter housings must be depressurized before performing any maintenance activities.

TROUBLESHOOTING CHART

Problem	Probable Cause	Solution
Too High Initial Pressure Drop	Air flow Excessive for housing size. Filter media grade too fine.	Install larger filter. Install coarser element.
	Too much oil/water from compressor.	Precoalesce with grade 10 - oversize housing.
Premature Clogging (Air Flow Drops Off)	Lubricant improperly selected for compressor, causing varnish or carbonizing of lubricant.	Change oil, consult with lubricant supplier.
	Excessive inlet particulate contamination.	Prefilter with Interceptor.
	Excessive lubricants present on element caused by either high lubricant viscosity or very high inlet aerosol level.	Prefilter with Grade 10 and oversize coalescer to compensate.
	Oil/water emulsion forming on element.	Remove water by drip leg, aftercooler. Install mechanical separator upstream.
Oil Present Downstream of Filter	Ice forming or oil viscosity too high due to Excessively low unit temperature.	Raise temperature.
	Bowl not properly drained of waste liquids.	Drain regularly, use auto drain.
	Element not sealing.	Replace element.
	Filter piped backwards.	See "INSTALLATION"; Re-pipe.
	Filter being by-passed by valving.	Close valve.
	Contaminated air entering system from second source downstream.	Change pipe or relocate filter.
	Oil vapors condensing downstream.	Install an adsorber.
	Excessive inlet oil level.	Precoalesce with Grade 10 and possibly oversize.
	Element damaged, chemically attacked or not installed in housing.	Change and consult distributor or factory for other than neutral pH.
	Oil present in precontaminated downstream piping.	Clean piping.
	Excessive flow surges.	Relocate filter, precoalesce with grade 10 and oversize coalescers.

ASME Coded Vessels

Compressed Air & Gas Filters

- Coalescing, Particulate & Hydrocarbon Adsorption
- Flows up to 37,000 SCFM (62,000 m³/hr)
- 3" NPT to 16" Flange

Compressed Air
and Gas Filters

Bulletin 1300 - 400/USA

Finite®

Finite® Large Capacity

ASME Vessels

Finite Filter's large capacity ASME filter vessels have been designed specifically for our coalescing elements and incorporate large sump capacities and generous exit cavities for maximum performance with low differential pressures.

All units are "U" stamped and conform to ASME Section VIII standard code for pressure vessels. With flow capacities to 37,000 SCFM and optional materials of construction, most compressor source filtration requirements can be met.

Specifications:

Porting to: 16" Flange

Flows to: 37,000 SCFM (63,000 m³/hr)

Design: ASME Code/CRN (Canadian Registration)

Available Options:

High Temperature
High Pressure
All Stainless Construction

Typical Applications

Coalescing (Oil Removal)

- Compressed air system protection
- Dryer protection
- Paint spray booths
- Microelectronics prefiltration

Interceptor (Particulate Removal)

- Natural gas systems
- Desiccant dryer afterfilter
- Prefilter for coalescer
- Systems with high particulate concentration
- Particulate protection for non-lubricated systems

Adsorber (Vapor Removal)

- Odor removal
- Food packaging
- Powder paint systems

Applications & International ISO Standards

International Standard ISO8573-1

is fast becoming the industry standard method for specifying compressed air cleanliness.

The chart to the right details the specifications of the classes.

The diagrams below describe various systems in terms of their corresponding ISO classification.

Notification as specified in ISO8573 - 1

Class	Solid		Water		Oil	
	Maximum particle size (µm)	Maximum Concentration ppm (mg/m ³)	Maximum Pressure Dew point °F (°C)		Maximum Concentration ppm (mg/m ³)	
1	0.1	0.08 (0.1)	-94 (-70)		0.008 (0.01)	
2	1	0.8 (1)	-40 (-40)		0.08 (0.1)	
3	5	4.2 (5)	-4 (-20)		0.83 (1)	
4	15	6.7 (8)	37 (+3)		4.2 (5)	
5	40	8.3 (10)	45 (+7)		21 (25)	
6	-	-	50 (+10)		-	-

Typical Applications

ISO Class 2 Solid Water 3 Oil

ISO Class 1 Solid 4 Water 1 Oil

ISO Class 2 Solid 4 Water 3 Oil

ISO Class 1 Solid 2 Water 1 Oil

Note: In the pictorial examples shown above, the contribution of hydrocarbon vapors has not been taken into account in determining the oil class category.

Determine your application, media grade, media type and end seals.

Find your (or similar) application from the descriptions below, from the basic application circuits on the previous page, or consult a **Finite®** application engineer. Determine media grade, media type and end seal required. If your application requires a coalescing element, use the information listed below. For other media types, please see the following page.

Coalescing Elements (removal of liquids and particulate)

Media type Q is shown here. Media type C has the same coalescing outer layer, without the inner pleated layer.

Media type C or Q

Available in grades 6, 8 or 10

Air Flow: Inside to Outside

This coalescing element is composed of an epoxy saturated, borosilicate glass micro-fiber tube. Type Q has a pleated cellulose inner layer as a built-in prefilter. This element is metal retained for added strength, and includes a synthetic fabric layer.

Media type D

Available in grades 6, 8 or 10

Air Flow: Inside to Outside

This type D element is composed of a micro-glass coalescer, just like type C, however it is surrounded by two metal retainers. These metal retainers, coupled with a glass drain layer, make this a robust element designed to handle high temperatures.

Media type 7CVP

Air Flow: Inside to Outside

Finite's 7CVP media consists of two layers. The outer layer consists of a dense matrix of glass fibers. This coalescing layer provides highly efficient aerosol removal and very low pressure drop. The inner layer effectively traps dirt particles, protecting and extending the life of the outer layer. A metal retainer is used for strength and stability.

This media is used in bulk coalescing applications and when relatively high efficiency and low pressure drop are required.

Type 7CVP elements are great prefilters for refrigerated air dryers. This element maintains dryer efficiency by preventing coating of coils with oil or varnish.

For a high temperature version of this element, specify type **7DVP**.

For types C, Q and D... Choose your grade...

Grade 6 filters are used when "total removal of liquid aerosols and suspended fines" is required. Because of its overall performance characteristics, this grade is most often recommended.

A grade 6 element is great prefilter protection for desiccant air dryers. This element prevents oil or varnish from coating the desiccant, while maintaining the dryer efficiency.

Grade 8 filters combine high efficiency with high flow rate and long element life. A separate prefilter is not required for "normal to light" particulate loading.

A grade 8 element is great prefilter protection for refrigerated air dryers. This element maintains dryer efficiency by preventing coating of coils with oil or varnish.

Grade 10 filters are used as prefilters for grades 6 or 8 to remove gross amounts of liquid aerosols or tenacious aerosols which are difficult to drain.

A grade 10 element coupled with media type D is a recommended afterfilter for heat regenerated type dryers. This grade is often referred to as a coarse coalescer.

Water Separator Element (removal of bulk liquids)

Media type 100WS

Air Flow: Inside to Outside

This rolled stainless steel mesh element has two metal retainers with rolled mesh steel in between. It is an extremely robust design.

This media is used for the reduction and elimination of excess liquids in gas streams. Excellent prefiltration for coalescing grades 6 and 10 when extreme quantities of liquid contaminants are present.

Interceptor Element (removal of particulate)

Media type 3P

Air Flow: Outside to Inside

This particulate element is constructed of pleated cellulose with a 3 micron rating. It is metal retained for added strength and includes an outer synthetic fabric layer.

3P particulate interceptor elements are used where very high dirt holding capacity and relatively fine pore structure are required.

Adsorption Element (removal of odor)

Media type A

Air Flow: Outside to Inside

This hydrocarbon vapor removal element consists of an ultrafine grained, highly concentrated, activated carbon sheet media. It is metal retained for added strength and includes an outer synthetic fabric layer.

This media is used to remove hydrocarbon vapor and is safe for breathing air.

Finite® Media Specifications

Grade Designation	Coalescing Efficiency 0.3 to 0.6 Micron Particles	Maximum Oil Carryover ¹ PPM w/w	Micron Rating	Pressure Drop (PSID) @ Rated Flow ²	
				Media Dry	Media Wet With
6	99.97%	0.008	0.01	1.5	4.0
7	99.5%	0.09	0.5	0.25	0.5

See pages 26-27 for more information.										

How to order replacement elements:

1. Choose the media grade, type and end seals that you need.
2. Look in the Housing Selection Chart above and find the respective Replacement Element Number.
3. Put 1 & 2 together. For example: 6QU51-280 or 7CVP85-250.

¹Dimensions are in inches (centimeters.) ²Sump Capacity is in gallons (liters.) ³Weight is in pounds (kilograms.)

Materials of Construction

Body: Carbon Steel

Paint: Epoxy Enamel (Gray)

Internals: Epoxy powder painted carbon steel

Max Temperature: 450°F (232°C)

Seals: Inorganic flange gasket (single element vessels)
Fluorocarbon o-ring (multi element vessels)

Internal Coating: Epoxy enamel

Specifications

Max Pressure: 185 PSIG (12.5 bar)

Meets A.S.M.E. Code, Section VIII, Division 1

Note: Consult factory for special requirements.

Maintenance Bulletin - ASME Series (3" NPT to 16" Flange)

Caution!

1. Vessels are shipped from the factory without element(s). The element(s) are shipped separately. The vessel should be set and plumbed before installation of element(s) and a differential pressure gauge to minimize the possibility of damage.
2. Air temperature must be below 200° F when using the nylon tubing supplied with the differential pressure gauge kit. Use copper or stainless steel tubing for higher temperature applications, and remote mount the gauge (do not attach to vessel nameplate bracket).

Air Flow Direction for Coalescing:

When coalescing liquid aerosols from an airstream, the waste liquid must be drained from the vessel sump. In order for this liquid to be properly drained, the air must flow from the inside of the element to the outside. **

** Be especially careful when plumbing a vessel containing "DS" or "DV" element(s). This high temperature element is commonly used as either a coalescer (liquid removal) or a particulate filter. Inlet and outlet labels are installed at the factory denoting coalescing (in to out) flow.

Proper Flow Directions:

Inside to Out: All elements used for coalescing, ("C", "Q", "7CVP", "7DVP", and "D") and water separation ("100WS").

Outside to In: All elements used for particulate removal only; adsorbers, particulate, and high temperature ("A", "P" and "D") elements.

WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application including consequences of any failure, and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

FF16-3615	KV-2A	80055	71054	80000	75036V

Initial Installation Notes

1. Remove element from carton. Be careful not to damage media O.D. or elastomer end seals.
2. Inlet and outlet gauge ports should be plugged if unused.
3. Drain valve(s), whether manual or automatic, should be closed.
4. To avoid damage, install element(s) after housing has been plumbed and inspected. Follow "Element Replacement" procedure.
5. Check flow direction of elements on page 32.
6. Slowly initiate flow to avoid exceeding element Maximum flow rate, especially in high volume systems.
7. Avoid venting the air system so as to cause a reverse flow through the vessel.

Element Replacement

1. Depressurize housing, remove closure bolts and cover.
2. Unscrew and remove element retainer nut and blank end cap.
3. Pull clogged element straight out, avoiding element frame and discard.
4. Clean blank and closure end cap sealing surfaces and inspect for damage. (If sump requires cleaning, element frame is pipe thread mounted and can be removed by rotating C-C-W. - notch provided.)
5. Wipe new element seals off and carefully place element over element frame. Squarely seat against flat end cap sealing surface.
6. Replace blank end cap squarely against element seal and replace retainer seal nut.

Tighten only until element seals are slightly compressed.

INSTALLATION

Finite filters should be installed in a level pipeline mounted vertically, the vessel sump downward with one element length clearance above or below vessel for element removal. The filter should be installed at the highest pressure point available, and as near as possible to the equipment to be protected and have a drip leg immediately upstream. The coalescers and particulate filters should be visible and easily accessible for periodic draining and maintenance.

The filters should be piped in accordance with the "IN" and "OUT" labels. Should these tags become unreadable, install the coalescer so that flow passes through the filter tube from inside-to-outside. Plumb particulate and adsorber filters so that flow passes through the filter from outside-to-inside. The various filter locations relative to other equipment should be as follows (unless specific instructions are given to the contrary):

- (1) COALESCERS and WATER SEPARATORS (WS) (liquid removal) are placed before the dryer.
- (2) The INTERCEPTOR (particulate removal) should be installed ahead of the COALESCER when prefiltration is required.
- (3) The INTERCEPTOR (particulate removal) can also be installed downstream of desiccant dryers to prevent desiccant migration.
- (4) The ADSORBER (vapor removal) is always preceded by a COALESCER.

When Coalescer or Interceptor differential pressure reaches clogged condition (6-8 PSID) replace element immediately. DO NOT ATTEMPT TO CLEAN FILTER TUBE. System contamination can result. DO NOT BY-PASS THE COALESCER unless the by-pass line is also filtered.

OPERATION

Air coalescing is a continuous, balanced, steady-state process occurring at or below rated flow, which depends on two factors for high performance: (1) The vessel sump must be kept free of waste liquid buildup and (2) The element must be replaced when the differential pressure reaches 6-8 psid, 12 psid Maximum. Differential pressure can be sensed at the inlet and outlet ports by two gauges, or by Finite's KBDPI-25 differential pressure gauge.

Vessel sump draining is accomplished by opening the customer supplied manual drain valve, at least once every 8 hours depending on the liquid load. Connecting an automatic drain to the vessel sump is highly recommended. (See literature on Finite's TV-50, TD-50 or ZLD-10 timed drain valves.)

Floor standing vessels have two sumps and two drain connections. Never connect these drains together as contamination of the outlet gas will occur. Two separate drain lines with separate drain traps or valves should be used to ensure that contamination will not occur.

A Finite coalescer, under normal system conditions, will operate for 6 to 12 months before reaching its Maximum differential pressure. A "PU" series Interceptor, or a "QU" series coalescing element with a pleated prefilter can be employed ahead of the coalescer to increase its life. The interceptor should be replaced when its differential pressure reaches 8 - 10 psid.

Finite coalescers are designed for nominal operation with 10-20 wt. oil. Any viscosity increase over that of 20 wt. oil must be offset by a proportionate oversizing of the filter element. Consult your Finite representative.

TROUBLESHOOTING CHART

Problem	Probable Cause	Solution
Too High Initial Pressure Drop	Air flow Excessive for housing size. Filter media grade too fine.	Install larger filter housing. Install coarser element.
	Too much oil/water from compressor.	Pre-coalesce with grade 10 - oversize housing.
Premature Clogging (Air Flow Drops Off)	Lubricant improperly selected for compressor, causing varnish or carbonizing of lubricant.	Change oil, consult with lubricant supplier.
	Excessive inlet particulate contamination.	Prefilter with Interceptor.
	Excessive lubricants present on element caused by either high lubricant viscosity or very high inlet aerosol level.	Prefilter with Grade 10 and oversize coalescer to compensate.
	Oil/water emulsion forming on element.	Remove water by drip leg, aftercooler. Install mechanical separator upstream.
Oil Present Downstream of Filter	Ice forming or oil viscosity too high due to Excessively low unit temperature.	Raise temperature.
	Bowl not properly drained of waste liquids.	Drain regularly, use auto drain.
	Element not sealing.	Clean sealing surfaces or replace element.
	Filter piped backwards.	See "INSTALLATION"; Re-pipe.
	Filter being by-passed by valving.	Close valve.
	Contaminated air entering system from second source downstream.	Change pipe or relocate filter.
	Excessive inlet oil level.	Check source and eliminate.
	Element damaged, chemically attacked or not installed in housing.	Change and consult distributor or factory for other than neutral pH.
	Oil present in pre-contaminated downstream piping.	Clean piping.

BA-Series

Dual-Stage Compressed Air Filters

- Coalescer/Adsorber Combination Unit
- Flows 75 SCFM (128 m³/hr)
- Pressures to 500 PSIG (34 bar)

Compressed Air
and Gas Filters

Bulletin 1300 - 905/USA

Finite[®]

Finite® Breathing Air Purifiers

Dual-Stage Compressed Air Filters - BA-Series

Finite®'s BA-Series purifiers are available in 1/4" - 1" NPT connection sizes.

BA-Series filters are designed to be used as point-of-use breathing air filters. This combination unit contains both a fine grade coalescing filter element and an activated carbon vapor removal element.

BA-Series filters may also be used in applications requiring compressed air to be free of odor or taste-bearing hydrocarbons. Food/beverage applications are an Example of where compressed air comes in contact with the product. The BA-Series can also be used as a prefilter for critical needs such as zero air generators, membrane filters and many others!

Replacement elements are supplied in convenient repair kits which include one coalescing element, two activated carbon adsorber elements, and replacement seals. Two adsorber elements are supplied because the stage one coalescer will routinely outlive the extremely sensitive second stage adsorber element.

For severe applications with Excessive solid and liquid contaminants, the BA-Series should be preceded by **Finite®** H-Series (Bulletin 1300-993/USA) pre-coalescer or interceptor filters.

Finite® also supplies pressure regulators which can be used downstream of the BA-Series to lower system operating pressures to desired levels for breathing air applications. Please refer to **Finite®** bulletin 1300-703-3/USA.

Finite®'s BA - Series Offers...

- Connection sizes: 1/4" - 1" NPT
- Flows: Up to 75 SCFM (128 m³/hr)
- Maximum Pressure: 500 PSIG (34 bar)
- Maximum Temperature: 175° F (79° C)
- Drain Port: 1/8" NPT with standard manual drain (float drain available)

Typical Applications

- Industrial Breathing Air
- Aircraft Cabin Air
- Zero Air Generator Prefilter
- Instrument Air
- Food Processing/Packaging
- Membrane Prefiltration
- Instrument Air Dryer Prefilter

How it works

Compressed air enters port: 1 of the housing and is directed down a hollow chamber into the first-stage coalescing element (bottom). Oil, water and solid contaminant is removed with a 99.97% or higher efficiency as the air flows from the inside of the element to the outside. The coalesced liquid drains off the element into the bowl where it is removed either manually, or by an automatic float drain. The oil-free air then is redirected upwards to the inside of the adsorber element

(top) by means of a non-bypassing separation device. The second stage's activated carbon element collects hydrocarbon vapors as the air flows from the inside to the outside of the element. The purified air then exits through port 2 of the housing.

Note: This product does not remove toxic gases from the air stream. A carbon monoxide monitor is recommended.

Compressed Air
and Gas Filters

Choice of media types

All BA filters have an activated carbon element (Stage 2). Depending on the application, you may either choose to use a micro-glass coalescer (C) or a micro-glass coalescer with a built-in prefilter (Q) (Stage 1.)

Stage 1

C: Micro-glass coalescer

Q: Micro-glass coalescer with built-in pleated prefilter

Grade 4

Grade 6

Stage 1 coalescers come in grade 6 (standard) or grade 4. Choose grade based on coalescing efficiencies in the chart

Stage 2

A: Activated Carbon

Grade A

Stage 2 adsorber polishes air stream of final trace amounts of hydrocarbon vapors with an efficiency of 99%+.

Coalescing Media Specifications

Grade Designation	Coalescing Efficiency .3 to .6 Micron Aerosols	Maximum Oil Carryover ¹ PPM w/w	Micron Rating
4	99.995%	.003	.01
6	99.97%	.008	.01

¹Tested per ADF-400 at 40 ppm inlet.

Q. What is the expected life of my BA-Series filter element?

A. expected life of the filter elements is entirely dependent on the quality of the incoming compressed air, but can be several thousand hours. However, the elements should be changed whenever odors and/or taste become present regardless of hours in operation.

Application:

Use any compressor with aftercooler and refrigerated dryer. Air intended for use as industrial breathing air and in decompression chambers. CAUTION:

Always use high temperature synthetic lubricants and monitor (alarm) for carbon monoxide concentrations exceeding established Maximum recommended levels. This system will not eliminate toxic gases!

Bulletin 1300 - 450/USA

Compressed Air
and Gas Filters

Finite[®]

Finite's Air and Gas Microfiltration Products - Micro-Series

Finite® Filter's Micro-Series filters are designed to provide absolute rated membrane filtration for the semiconductor, pharmaceutical, and food and beverage markets. Our pleated membrane media offers absolute removal ratings for contaminants as small as $0.01\ \mu\text{m}$ while providing lower differential pressures than competitive membrane products.

Finite's pleated PTFE media has the lowest pressure drop at rated flow and the highest efficiency in the filtration industry. These important factors provide substantial savings for our customers.

All filter housings are constructed of 316L stainless steel and have a Maximum pressure rating of 150 PSIG/10 bar. Connection sizes range from 1" NPT to 6" flange.

Industries & Applications

Semiconductor/Microelectronics

Clean, dry air (CDA) final filters

Hard disk manufacturing

Automated disk testers

Wafer drying systems

CDA to replace use of nitrogen

Wafer polishing equipment

Pharmaceutical/Medical

Bag cleaning

Laboratory air

Filtration of bulk gases

Bottle filling machines

Venting of holding tanks

Gas calibration equipment

Food and Beverage

Aseptic packaging

Blow molding

Purging

Air bearings/motors

Conveying

Tank padding

Typical Clean, Dry Air (CDA) Installations

ASME Vessels are described on pages 23-34.

Media Selection

Flow vs. Dry Pressure Drop
at 100 PSIG_{/7 bar}

Features and Benefits - PTFE Membrane

- PTFE membrane media is non-fiber releasing and provides broad chemical compatibility
- High flow rates and optimized surface area reduce filter consumption
- 100% Integrity tested
- Pleated construction provides large high purity filtration area for Maximum yields
- Biosafe in accordance with USP Class V1-121°C Plastics Tests
- Polypropylene support hardware with fluorocarbon o-ring seals withstands demanding operating conditions
- Narrow pore size distribution ensures the ultimate in retention and flow rate
- All materials of construction are FDA listed as acceptable for food contact according to CFR Title 21
- Manufactured and packaged in Class 10 clean room
- 99.999999% (8 log) efficiency at specified removal ratings (0.01 μ m, 0.02 μ m)

Membrane Element Specifications

Sealing Technology: Thermal Bonding

O-Rings/Gaskets: Fluorocarbon

Maximum Differential Pressure (FWD): 60 PSID

Maximum Differential Pressure (REV): 50 PSID

Packaging: Double bagged in Class 10 clean room

Double Open Ended-D.O.E.
(MT Housing Series)

222/Flat
(MF Housing Series)

MT1 Series

- 316L Stainless Steel
- Thru-rod housing design
- 1" NPT threaded inlet and outlet ports
- Threaded vent and drain connections
- T-Type (line mounted design)
- Single double open end element design
- Cartridge lengths 10" and 20" available
- Fluorocarbon seals used throughout

MF2 & MF3 Series

- 316L Stainless Steel
- Single fluorocarbon o-ring for positive housing seal
- Swing bolts w/ eyenuts
- ASME Code - UM Stamped
- Threaded vent and drain connections
- Adjustable leg height
- Flanged or threaded inlet and outlet connections
- Side inlet, bottom outlet

MF4 & MF6 Series

- 316 Stainless Steel
- Single fluorocarbon o-ring for positive housing seal
- Swing bolts w/ eyenuts
- ASME Code - UM Stamped
- Threaded vent, drain, gauge connections
- Mechanical cover lift standard

Instrumentation
and Steam Filter

Finite®

Finite®

Instrumentation and Gas Sampling Filters

Finite's instrumentation and point-of-use product line offers compressed air/gas filtration solutions for food processing, medical, chemical processing, and compressed natural gas applications.

Typical installations include contaminant removal for breathing air, protection of gas analyzers and prefilters for instrument air dryers.

Our UNI-CAST element technology allows us to vacuum form high-efficiency particulate and coalescing filter elements. Our elements are designed with high void

volumes to provide longer element life while yielding lower pressure drops.

Made directly from the highest quality microglass fibers available, **Finite's** elements are constructed in 5 porosity grades and 9 media types to meet nearly all compressed air/gas applications.

Finite's instrumentation filter housings are carefully engineered to meet critical application specifications. A complete line of stainless steel housings are available with a variety of pressure ratings

and flows for corrosive applications. Combination aluminum head/nylon bowl assemblies are offered for lower operating pressures and temperatures, while disposable plastic in-lines are offered for low flow and OEM applications.

If you have a specific need or are unable to find the compressed air/gas filter your application requires, call us!

Let one of **Finite's** application engineers assist you! Visit us on the web at www.parker.com/finitefilter or call us toll-free 1-800-521-4357 and ask for technical support.

How to select your Finite® Filter...

The following steps will help you to choose the correct filter for your application. If there are other factors involved or if you have special requirements, call **Finite's** technical support.

1. Evaluate the requirements of your application. The sketches on page 49 depict popular Examples of gas sampling, process filtration, instrument air and breathing air applications.
2. What type of filtration is needed? (See pages 50-51) Coalescing filter medias remove solid and liquid contaminants from gas streams. Particulate filter media removes solids from gas streams. Adsorber media removes hydrocarbon vapors from gas streams.
3. Are you searching for a specific micron rating ... or efficiency rating? If so, page 51 provides a complete breakdown of **Finite's** filter media grades and their performance specifications.
4. What are the operating conditions of your application? Key criteria to consider: flow, pressure, materials of construction ... stainless steel, nylon, aluminum, etc. Pages 52-58 provide detailed descriptions of the various products available.
5. Sizing - The flow chart on pages 59-60 lists the flow rates (SCFM) at various operating pressures. Filters are available with flows up to 3366 SCFM and pressure ratings up to 5000 PSIG.

Finite® Instrumentation Applications

Finite Media Types, Grades and Efficiencies

Coalescing elements:

Coalescing elements are specially designed for the removal of liquid contaminants from gaseous flows. These media types flow from the inside of the element to the outside. Coalesced liquid (water and oil) collects in the bowl where it is drained, while clean air or gas exits the housing through the outlet port. Particulate contaminants are captured and held in the media.

Type C

Coalescing element composed of an epoxy saturated, borosilicate glass microfiber tube in intimate interlocking contact with a rigid retainer. Surrounded by a coarse fiber drain layer, retained by a synthetic fabric safety layer. Some models are available with molded elastomeric end seals (CU), or with metal end caps and fluorocarbon gaskets.

Type H

Coalescing element similar to type "C," however no rigid retainer is used. Typically used in applications with low or constant flow rates.

Type Q

Coalescing element with the same configuration as "C" tube, but with "3P" type pleated cellulose prefilter built-in. Includes molded elastomeric end seals (QU). Some models offer the option of metal end caps and fluorocarbon gaskets.

Type 7CVP

Coalescing element made of pleated glass media. Metal retained for added strength. Includes metal end caps and fluorocarbon gaskets for proper sealing. Only available in grade 7.

Water Separator element:

Type 100WS

This all stainless steel element has two metal retainers with rolled mesh screen in between. This cleanable element combines liquid droplets and aerosols, separating the liquids from the gas stream in systems with high liquid loads.

Grade 4

Grade 4 filter elements are very high efficiency coalescers; for elevated pressures or lighter weight gases. Recommended when system pressure exceeds 500 PSIG.

Grade 6

Grade 6 filter elements are used when "total removal of liquid aerosols and suspended fines" is required. **Because of its overall performance characteristics, this grade is most often recommended below 500 PSIG.**

Grade 7CVP

Grade 7CVP filter elements are made with two layers. The inner layer (left) effectively traps dirt particles, protecting and extending the life of the outer layer. The coalescing outer layer (right) consists of a dense matrix of glass fibers, providing highly efficient aerosol removal.

Grade 8

Grade 8 filter elements provide high efficiency filtration in combination with high flow rate and long element life.

Grade 10

Grade 10 filters are used as prefilters for grade 6 to remove gross amounts of aerosols or tenacious aerosols which are difficult to drain. This grade is often used as a 'coarse' coalescer.

Media Grades:

Adsorption elements:

Adsorption elements are used to remove vapors (hydrocarbon or water) that are not removed by the coalescing filter. Hydrocarbon vapors collect in the element, while clean air exits the housing through the outlet port. In this element, the air or gas flows from the outside of the element to the inside.

Type A

Hydrocarbon vapor removal element. Ultrafine grained, highly concentrated, activated carbon sheet media. Includes molded elastomeric end seals (AU). Some models offer the option of metal end caps and fluorocarbon gaskets.

Particulate elements:

Particulate filters such as G, E, T and 3P flow from the outside of the element to the inside. Particles collect in the element, while the clean air exits through the outlet port.

Type 3P

Pleated cellulose particulate removal element. Includes molded elastomeric end seals (3PU). Some models offer the option of metal end caps and fluorocarbon gaskets.

Type G

Particulate removal element constructed of the same fiber matrix as type "C", but with no rigid retainer or drain layer.

Type F

Particulate removal element like "G" tube, except fluorocarbon saturant replaces epoxy.

Type T

Particulate removal element like "G" tube, except high temperature fluorocarbon saturant replaces epoxy.

Grade 3P

Three micron pleated cellulose filters are used for particulate interception where very high dirt holding capacity and a relatively fine pore structure are required.

Grade A

A (Adsorption) filters are used to remove hydrocarbon vapor, most typically in preparation for breathing air. (Must be preceded by grade 6C coalescer.)

Finite® media grades and specifications

Finite media grades determine the filtration efficiency. Capture efficiencies are available up to 99.999%. Micron ratings range from 0.01 to 3 micron. The columns on the right note both the wet and dry pressure drops.

Media Grade	Coalescing Efficiency 0.3 to 0.6 Micron Particles	Coalescing Filters - C, H, Q, 7CVP Maximum Oil Carryover ¹ PPM w/w	Particulate Filters - 3P, G, E, T Micron Rating	Pressure Drop (PSID) @ Rate Flow ²	
				Media Dry	Media Wet With 10-20 wt. oil
4	99.995%	0.003	0.01	1.25	3-4
6	99.97%	0.008	0.01	1.0	2-3

¹Tested per ADF-400 at 40 ppm inlet.

²Add dry + wet for total pressure drop.

³Oil vapor removal efficiency is given for A media

Bypass or High Pressure Filters

Application: Finite's high pressure filters are available with housings made of 316 stainless steel (S5R,S1R) or aluminum (A5R, A1R). This series is used for gas bypass sampling, high pressure compressed natural gas filtration, and applications with elevated pressures and corrosion resistance requirements. High efficiency particulate and coalescing elements are available with these units. Includes drain port with plug. Connection size of drain port matches inlet and outlet connection size.

How to Order:

☐	☐	☒	☐	☐	☐	04-023
Materials	Port Size		Media Grade	Media Type		Element Size
A = Aluminum	5 = 1/8" NPT		4	G		
S = 316 Stainless Steel	1 = 1/4" NPT		6	T		
			8	F		
			10	H		
				C		

For Example: S1R-6C04-023 for complete assembly, including element. S1R X 1 for an empty housing.

S1IL Stainless Steel Particulate Filters

Application: The S1IL filter is typically applied for the particulate filtration of bottled gas or as a last chance filter where there is limited space availability. It does not have a drain port and should only be used when little or no liquid contaminant is expected.

How to Order:

☒	☒	☒	☐	☐	☐	04-013

For Example: QN15N-10QUN for complete assembly, including element. QN15NN X 1 for an empty housing.

Note: Although the element size is not included in the part number construction for this filter, the size, 10-025, is needed to order replacement elements. For Example, 6C10-025 X 8.

Instrumentation and Steam Filter

Low Flow, Dual-Stage In Line Filters

Application: The ILN, IKN in-lines are used for low flow circuit protection on sensing instruments, analyzers, air-logic, and other control devices. High-efficiency coalescing and particulate elements are available. Drain types available include manual push, constant bleed or no drain.

The design: This twist-lock plastic housing is designed for 50 PSIG Maximum operating pressure. The two-stage filter design allows for high efficiency element replacement and the reuse of the 74 micron prefilter (74P05-011 X 10).

How to Order:

☒ I	☐	☒ N	—	☐	☐	☐	☒ 05-011

High Efficiency Disposable In-Line Filters

Application: These high-efficiency, disposable in-line filters are great for analyzer and sensor protection, gas sampling, micro-system operation and robot and animation air preparation. This clear, nylon housing allows visible inspection of collected particulate. The full length internal tube support gives higher strength, even with system upsets.

Type ID In-line filters

The Type ID enclosure in conjunction with a 'G', 'T', 'F' or '44P' series element is designed to provide the most reliable, long lived, instrument air source, sensor protection, sample cleansing and purification available today. The center core provides stable backup support, reduces internal (tare) volume, centers the tube in the housing and distributes the contaminant load along the tube's entire length. Elements in the housing are sealed by a positive serrated arrangement with built-in redundancy, ultrasonically welded.

Type MD In-line filters

The Type MD housing in conjunction with a 'G', 'T', 'F' or '5P' element is designed to provide a high reliability instrument air source or sensor protection where some levels of condensed moisture or oil are present. A stand-pipe is molded into the lower housing to allow for a dry exit chamber as liquids collect at the tube base. Up to 3cc of liquid can be stored in this manner. The same tube size is employed as in the Type ID. Typical applications involve high condensate conditions such as vacuum or higher temperature systems.

Type SD In-line filters

For critical point-of-use, vapor free instrument or medical systems the Type SD provides Maximum activated surface exposure to the process gas while pre-filtering with grade 10 pads and preventing media migration with exit safety filters.

Adsorbing Media Available

Type A: Activated carbon for general use oil vapor removal.

Type J: Silica gel moisture trap dries gas, turns white when expended.

Type M: 13X molecular sieve for selective polishing and 'last trace' light hydrocarbon vapor removal.

Type O: Activated dye turns red when exposed to oil in system.

Specifications:

Standard 1/4" O.D. Tangs

4S = 1/8" Straight Barbs

4A = 1/8" Right Angle Barbs

Specifications:

Model Number	Max. Pressure	Max. Temp.
ID/SD/MD	100 PSIG/7 bar	125°F (All media types)

How to Order:

Finite® Steam Filter

Bulletin 1300 - 250/USA

All steam filters are sold with a spanner wrench and a preinstalled element.

Steam plays a very important role in a variety of industries including food and beverage, hospital, and pharmaceutical. In order to ensure effective and continuous operation of many processes in these industries, it is often critical that high quality steam is used. A Finite Steam Filter can be used to produce high quality steam by removing both particulate and condensate prior to critical processes. Although each industry's steam requirements may vary slightly, the solution is always the same...

Finite® Steam Filters!

Features

- 98% efficient at 0.1 micron
- Removes rust and other particle contamination
- Removes Excessive condensate from steam
- Disposable filter elements

Benefits

- Easy to install
- Lower yearly maintenance costs than competitive filters
- No costly downtime associated with the cleaning and backflushing of filter elements - just replace element every 6 weeks

Specifications

- Connection Size: 1" NPT
- Max. Pressure: 125 PSIG
- Max. Temp: 353°F
- Max. Flow Rate: 400 lbs./hr. at 125 PSIG
- Overall Height: 36 inches
- Minimum 14" clearance for element removal
- Weight: 25 pounds

Materials of Construction Part Numbers

- 304 Stainless Steel
- EPR Seals (2)
- Microfibre®

Steam Filter: SFN4-SE13-145

Replacement Element: SE13-145 x 8

Note: Steam Filter is sold with one spanner wrench and preinstalled element.

Replacement elements are sold in Boxes of eight. Contact factory for other connection configurations.

Use **Finite**® Steam Filters in...

Applications and Benefits

- Food and beverage manufacturing and packaging - Filter protects specific food products (i.e. potatoes) by eliminating overall contamination, taste differences, odor, and unwanted additives to food
- Meat packing facilities - Same benefits as above
- Dairies - To sterilize processing equipment and storage tanks
- Direct injection of steam into food - Provides shorter cooking times and more even cooking
- Breweries - Steam is used to provide the heat of pasteurization, production of hot liquor, bottle washing, bottling, canning processes, and Clean in Place (CIP) systems

food industry

Accepted Standards

- All materials are FDA approved
- USDA acceptance in federally inspected meat and poultry plants
- Complies with Pasteurized Milk Ordinance
- Complies with 3-A Sanitary Standards Committee's practice for producing culinary quality steam (Number 609-00)
- Finite Steam Filters meet the regulations for Indirect Food Additives used as Basic Components for Repeated Use for Contact Surfaces as specified in 21 CFR Part 177, and Current Good Manufacturing Practices, 21 CFR Part 110

hospitals

Applications and Benefits

- Reduces the number of malfunctioning valves and regulators
- Can be used at point-of-use to purify steam from a centralized system
- Sterilizing instruments
 - eliminates wet packs and staining of instruments
 - eliminates unnecessary maintenance and costly downtime on steam sterilizers

Applications and Benefits

- Injection of steam in pharmaceutical manufacturing
- Direct contact sterilization—Clean in Place (CIP) or Sterilize in Place (SIP)
- Clean room humidification
- Block and bleed systems (Steam provides a sterile barrier between a critical biological process and the environment)

pharmaceutical

High Pressure Filters

Compressed Air & Gas

- CNG and Alternative Fuel Filters
- Pressures to 6000 PSIG
- Ductile Iron, Stainless Steel & Aluminum Housings

Bulletin 1300 - 997/USA

Finite®

“High pressure systems are plagued with problems of contamination and require filtration protection.”

High Pressure & CNG Filters

High pressure compressors are used in a variety of applications. Many owners, operators and designers of high pressure compressed air or gas systems rely on Finite for high-quality air treatment filters. End users of high pressure compressed air, such as scuba divers and fire rescue workers, depend on this high quality breathable air.

Throughout the stages of compression many contaminants can enter into the system. Excessive amounts of liquid aerosols and solid particulate contamination are common in high pressure systems. In addition, higher temperature levels are possible and may cause liquid oils to varnish. This contamination can lead to poor component performance and wear that may lead to unscheduled maintenance.

Even submicronic contaminants in compressed air or gas systems can foul multistage compressors, increase maintenance costs or eventually make it into your final product.

Finite offers a variety of high pressure compressed air and gas filters. With our wide range of elements, we have a solution for every stage of compression, as well as at the point of use. Whether you are storing high pressure air or gas or using a continuous flow, count on Finite to protect your equipment from contamination. Finite is the solution to ending high pressure contamination fouling.

Alternative Vehicles Need High Pressure Filtration

Compressed Natural Gas, or CNG, is a leading alternative to traditional fuel for the automotive industry. CNG is used in passenger vehicles, pickup trucks, in transit and on school buses. It can be less expensive than gasoline, and is more environmentally friendly – it reduces the amount of carbon monoxide, carbon dioxide and hydrocarbon vehicle Exhaust emissions. Natural gas is gathered from a pipeline and

travels to a connecting compressor station. The gas is elevated to pressures ranging from 2000 PSIG up to 5000 PSIG and the resultant CNG is stored in large tanks. The CNG then makes its way to a gas dispenser where it is ready for use in natural gas vehicles. Contaminants can enter into the gas at any stage of this processing. Filters are critical at each stage to ensure clean gas as a final product. Contamination that collects

during handling, water that condenses in tanks and compressors that leak oil into the fuel stream are all problems that could shorten the life of expensive equipment, create unnecessary downtime and increase maintenance costs. From pipeline to engine, Finite filters provide the critical filtration required for most alternative fuel systems. See page 67 for more detailed information on this application.

How to select your Finite Filter...

The following steps will help you to choose the correct filter for your application. If there are other factors involved or if you have special requirements, call one of Finite's application engineers.	Evaluate the requirements of your application. The sketches on pages 66-67 depict popular Examples of breathing air, PET bottle blowing and alternative fuel applications.	What type of filtration is needed? Coalescing filter media removes solid and liquid contaminants from gas streams. Particulate filter media removes solids from gas streams. Adsorber media removes hydrocarbon vapors from gas streams. See pages 68-69 for more detailed information.
Are you searching for a specific micron rating... or efficiency rating? If so, pages 69 provide a complete breakdown of Finite's filter media grades and their performance specifications.	What are the operating conditions of your application? Key criteria to consider: flow, pressure, temperature, materials of construction (stainless steel, nylon, aluminum, etc.). Pages 70-89 provide detailed descriptions of the various products available.	Sizing: Flow charts are provided for each high pressure filter series. Flows are listed at various operating pressures. Filters are available with flows up to 6500 SCFM and pressure ratings up to 6000 PSIG.

High Pressure & CNG Filters

86-87	6000 PSIG Filters
88-89	High Pressure Accessories

High Pressure Breathing Air

The filtration of compressed air is critical to ensure that it meets stringent air quality requirements for use in breathing air applications as set forth by North American agencies such as the Occupational Health and Safety Administration (OSHA) and Canadian Standards Association (CSA). Breathing air is used for scuba tanks, fire rescue

equipment, and emergency respiratory gear. Any contaminants in the air stream may cause equipment damage and malfunction, requiring costly repairs and replacements, and ultimately creating a hazardous situation for any users of high pressure breathing air apparatus. The use of filters will protect the consumer's health and keep equipment safe and

fully operational. At the source, a coalescing filter will remove any oil or other liquid contaminants that may be carried downstream. At the point of use, conventional compressed air must be free of impurities such as moisture, oil vapors and any harmful tastes and/or odors before it can safely be used as breathing air.

High Pressure & CNG Filters

Source Air

Breathing Air

Point of use

For more information on H-Series filters, please see Bulletin 1300-993C.

PET Blow Molding

PET, or polyethylene terephthalate, is a recyclable material used to make bottles by blow molding. Food and beverage containers are just a few of the many products that can be manufactured from this thermoplastic. In order to ensure that these products remain contaminant free throughout a process, they must be manufactured with clean, dry air. The proper combination of filters will prevent compressor oils, pipe scale and other damaging impurities from building up on equipment.

PET Blow Molding

At the CNG Fueling Station

Installing a lower pressure particulate filter (H-Series Housing 3PU Media) before the compressor station will remove pipe scale to prevent compressor damage. Before the gas is transported from storage to the dispenser, prefiltration of the gas with two-stage coalescing will eliminate solids, oil and water generated during underground transit. For extra protection, a high efficiency coalescer should be placed at the gas dispenser to protect sensitive dispenser metering equipment and prevent oil from making its way into the vehicle.

High Pressure &
CNG Filters

For more information on H-Series filters, please see Bulletin 1300-993C.

Other applications include:

- General high pressure compressed air
- High pressure testing
- Offshore applications
- High pressure gas storage
- Corrosive gases
- Specialty gases
- Air-blast circuit breakers
- Leak testing of hydraulic equipment
- Shipboard air distribution systems

Onboard CNG Vehicles

Filtration is the key to guarding against damaging contaminants that could ruin a fuel system. Installing a coalescer upstream of the high pressure regulator extends the system's life and reduces maintenance costs. A low pressure filter can also be used downstream of the regulator to protect other fuel injection system components.

Finite Media Types, Grades and Efficiencies

Coalescing elements:

Coalescing elements are specially designed for the removal of liquid contaminants from gaseous flows. These media types flow from the inside of the element to the outside. Coalesced liquid (water and oil) collects in the bowl where it is drained, while clean air or gas exits the housing through the outlet port. Particulate contaminants are captured and held in the media.

Water Separator element:

Particulate elements:

High Pressure & CNG Filters

Type C

Coalescing element composed of an epoxy saturated, borosilicate glass microfiber tube in intimate interlocking contact with a rigid retainer. Surrounded by a coarse fiber drain layer, retained by a synthetic fabric safety layer. Some models are available with molded elastomeric end seals (CU), or with metal end caps and fluorocarbon gaskets.

For use with:

- FFC-110 (500 PSIG) Page 70
- FFC-110L (500 PSIG) Page 70
- SN8S (500 PSIG) Page 71
- M-Series (800 PSIG) Pages 72-74
- A5R/A1R (1000 PSIG) Page 75
- SM-Series (1200 PSIG) Page 76-77
- FFC-112 (3600 PSIG) Page 78
- FFC-112 SAE (3600 PSIG) Page 78
- FFC-113 (3600 PSIG) Page 79
- J-Series (5000 PSIG) Pages 80-82
- S5R/S1R (5000 PSIG) Page 83
- FFC-116 (5000 PSIG) Page 85
- SJ-Series (6000 PSIG) Pages 86-87

Type H

Coalescing element similar to type "C," however no rigid retainer is used. Typically used in applications with low or constant flow rates.

For use with:

- A5R/A1R (1000 PSIG) Page 75
- SM-Series (1200 PSIG) Pages 76-77
- S5R/S1R (5000 PSIG) Pages 83

Type Q

Coalescing element with the same configuration as "C" tube, but with "3P" type pleated cellulose prefilter built-in. Includes molded elastomeric end seals (QU). Some models offer the option of metal end caps and fluorocarbon gaskets.

For use with:

- M-Series (800 PSIG) Pages 72-74
- SM-Series (1200 PSIG) Pages 76-77

Type 7CVP

Coalescing element made of pleated glass media. Metal retained for added strength. Includes metal end caps and fluorocarbon gaskets for proper sealing. Only available in grade 7.

For use with:

- SN8S (500 PSIG) Page 71
- M-Series (800 PSIG) Pages 72-74

Type 100WS

This all stainless steel element has two metal retainers with rolled mesh screen in between. This cleanable element combines liquid droplets and aerosols, separating the liquids from the gas stream in systems with high liquid loads.

For use with:

- SN8S (500 PSIG) Page 71
- M-Series (800 PSIG) Pages 72-74
- J-Series (5000 PSIG) Pages 80-82
- SJ-Series (6000 PSIG) Pages 86-87

Type 3P

Pleated cellulose particulate removal element. Includes molded elastomeric end seals (3PU). Some models offer the option of metal end caps and fluorocarbon gaskets.

For use with:

- SN8S (500 PSIG) Page 71
- M-Series (800 PSIG) Pages 72-74
- SM-Series (1200 PSIG) Pages 76-77
- J-Series (5000 PSIG) Pages 80-82
- SJ-Series (6000 PSIG) Pages 86-87

Grade 4

Grade 4 filter elements are very high efficiency coalescers; for elevated pressures or lighter weight gases. Recommended when system pressure exceeds 500 PSIG.

Grade 6

Grade 6 filter elements are used when "total removal of liquid aerosols and suspended fines" is required. **Because of its overall performance characteristics, this grade is most often recommended below 500 PSIG.**

Grade 7CVP

Grade 7CVP filter elements are made with two layers. The inner layer (left) effectively traps dirt particles, protecting and extending the life of the outer layer. The coalescing outer layer (right) consists of a dense matrix of glass fibers, providing highly efficient aerosol removal.

Grade 8

Grade 8 filter elements provide high efficiency filtration in combination with high flow rate and long element life.

Grade 10

Grade 10 filters are used as prefilters for grade 6 to remove gross amounts of aerosols or tenacious aerosols which are difficult to drain. This grade is often used as a 'coarse' coalescer.

Media Grades:

Adsorption elements:

Particulate filters such as G, F, T and 3P flow from the outside of the element to the inside. Particles collect in the element, while the clean air exits through the outlet port.

Adsorption elements are used to remove vapors (hydrocarbon or water) that are not removed by the coalescing filter. Hydrocarbon vapors collect in the element, while clean air exits the housing through the outlet port. In this element, the air or gas flows from the outside of the element to the inside.

Type G

Particulate removal element constructed of the same fiber matrix as type "C", but with no rigid retainer or drain layer.

For use with:

- A5R/A1R (1000 PSIG) Page 75
- SM-Series (1200 PSIG) Pages 76-77
- S5R/S1R (5000 PSIG) Page 83
- S1IL (5000 PSIG) Page 84

Type F

Particulate removal element like "G" tube, except fluorocarbon saturant replaces epoxy.

For use with:

- A5R/A1R (1000 PSIG) Page 75
- SM-Series (1200 PSIG) Pages 76-77
- S5R/S1R (5000 PSIG) Page 83
- S1IL (5000 PSIG) Page 84

Type T

Particulate removal element like "G" tube, except high temperature fluorocarbon saturant replaces epoxy.

For use with:

- A5R/A1R (1000 PSIG) Page 75
- SM-Series (1200 PSIG) Pages 76-77
- S5R/S1R (5000 PSIG) Page 83
- S1IL (5000 PSIG) Page 84

Type A

Hydrocarbon vapor removal element. Ultrafine grained, highly concentrated, activated carbon sheet media. Includes molded elastomeric end seals (AU). Some models offer the option of metal end caps and fluorocarbon gaskets.

For use with:

- SN8S (500 PSIG) Page 71
- M-Series (800 PSIG) Pages 72-74
- SM-Series (1200 PSIG) Pages 76-77
- J-Series (5000 PSIG) Pages 80-82
- SJ-Series (6000 PSIG) Pages 86-87

Type 10JWM

Vapor adsorbing filter element consisting of a grade 10 microfiber tube, strengthened by a perforated metal retainer and then filled with molecular sieve, which works as a desiccant dryer, making the air clean and dry as it exits. This element should always be preceded by a coalescing filter.

For use with:

- J-Series (5000 PSIG) Pages 80-82

Type 10JWA

Vapor adsorbing filter element consisting of a grade 10 microfiber tube, strengthened by a perforated metal retainer and then filled with activated alumina, which works as a desiccant dryer, making the air clean and dry as it exits. This element should always be preceded by a coalescing filter.

For use with:

- J-Series (5000 PSIG) Pages 80-82

High Pressure & CNG Filters

Grade 3P

Three micron pleated cellulose filters are used for particulate interception where very high dirt holding capacity and a relatively fine pore structure are required.

Grade A

A (Adsorption) filters are used to remove hydrocarbon vapor, most typically in preparation for breathing air. (Must be preceded by grade 6C coalescer.)

Finite® media grades and specifications

Finite media grades determine the filtration efficiency. Capture efficiencies are available up to 99.999%. Micron ratings range from 0.01 to 3 micron. The columns on the right note both the wet and dry pressure drops.

500 PSIG Pressure Filters

FFC-110

Many CNG powered commuter vehicles, such as shuttle buses, taxis or vans, rely on FFC-110 filters to protect contaminants in the fuel tank from entering the engine.

Finite's FFC-110 is often used onboard CNG (compressed natural gas) powered vehicles to prevent contaminants in the fuel tank from getting into the engine, protecting critical engine components, like fuel injectors. Its small size allows for versatile installation and easy servicing. Each housing is powder painted for long-term corrosion protection. These coalescers are ideal for operating environments up to 500 PSIG. Coalescing efficiencies of 95% (grade 10) or 99.97% (grade 6) can be chosen to match the filter to the application. Both the FFC-110 and FFC-110L have an 1/8" NPT drain port with a brass petcock manual drain.

Specifications:

Model Number	Port Size (NPT)	Max. Pressure	Max. Temp.	Materials of Construction			Seals	Sump Capacity	Weight	Dimensions	
				Head	Internals	Bowl				Length	Width
FFC-110	1/4"	500 PSIG (34 bar)	175°F (79°C)	Chromated Aluminum	Stainless Steel	Chromated Aluminum	Buna-N	5.1 oz. (150 ml)	1.5 lbs. (0.68 kgs.)	7.8" (198.1mm)	3.1" (78.7mm)
FFC-110L	1/2"	500 PSIG (34 bar)	175°F (79°C)	Chromated Aluminum	Stainless Steel	Chromated Aluminum	Buna-N	4.7 oz. (140 ml)	1.8 lbs. (0.82 kgs.)	10.2" (259.1mm)	3.1" (78.7mm)

Flow Rates (SCFM):

Filter Housing Model	Media Grade	100 PSIG	250 PSIG	500 PSIG
FFC-110	6	15	35	67
	10	25	58	112
FFC-110L	6	30	69	135
	10	50	115	224

How to Order:

How to Order:							Bowl	Element Grade
F	F	C	-	1	1	0	Leave blank for standard	-
							L (Long)	6 10

Example:
FFC-110-6

Mounting bracket available: BK-M

Replacement Elements Available:

Filter Housing Model	Media Grade 6	Media Grade 10
FFC-110	CLS110-6 X 8	CLS110-10 X 8
FFC-110L	CLS110-6L X 4	CLS110-10L X 4

Note: X 4 or X 8 in the part number signifies how many elements are sold in a Box.

SN8S

Bottling plants use stainless steel system components for their critical processes. In applications where stainless steel is required, use the SN8S to remove contaminants from your compressed air or gas system.

Finite's 500 PSIG SN8S filter is the best solution for most critical or corrosive compressed air/gas applications. Its 2" NPT stainless steel housing is a perfect fit for food processing, bottling plants and pharmaceutical manufacturing, where stainless steel system components are required. Bulk liquid from gas separation, oil coalescing, particulate removal and vapor adsorber filter elements are available. The housing has a plugged 1/4" NPT drain connection. The optional ADS-50 (see page 89) stainless steel auto drain can be easily connected with standard pipe fittings.

High Pressure & CNG Filters

Specifications:

Model Number	Port Size (NPT)	Max. Pressure	Max. Temp. for each Element Type	Materials of Construction			Seals	Sump Capacity	Weight	Dimensions	
				Head	Internals	Bowl				Length	Width

How to Order Replacement Elements:

Element and housing sold separately.
Elements available (one per Box):

*CU24-187 X 1
*DS24-187 X 1
3PU24-187 X 1
AU24-187 X 1
7CVP24-187 X 1
100WS24-187 X 1

* insert grade: 4, 6, 8, 10
For more information on element selection, please see pages 68-69.

For Example: 6CU24-187 X 1

800 PSIG Pressure Filters

M-Series

PET bottle blowing plants rely on the filtration protection of the M-Series to meet stringent standards for contact with food and beverage containers.

Finite's M-Series provides the needed filtration for a wide variety of compressed air/gas applications. Varied porting and connection styles, along with a robust design make this an extremely versatile filter. It is a perfect fit for interstage filtration applications for multistage, high pressure gas compressors. The aluminum heads and drawn aluminum bowls are compatible with special gases such as argon, hydrogen, compressed natural gas and helium. This housing design minimizes the problem of porosity often present with housings made by die casting.

Specifications:

Model Number	Port Size NPT	Max. Pressure	Max. Temp.	Materials of Construction				Sump Capacity	Weight	Dimensions	
				Head	Internals	Bowl	Seals			Length	Width

How to Order:

Series Name	Port Type	Port Size	Bowl	-	Element Grade	Element Type	End Seal	Accessories
M	N (NPT) T (BSPT) F (BSPF)	1 (1/4") 15 (3/8") 2 (1/2") 3 (3/4") 4 (1") 8 (2")	S (Standard) L (Long) Note: L is not available for 3/4" and 2" port size housings		4 6 8 10	C (Coalescer)	1/4" - 1" port size: Leave blank for no end seal or U (Urethane) 2" port size: V (Fluorocarbon)	N (No Accessories) G (Gauge) Standard on 2" port 
					4 6 8 10	Q (Coalescer with built-in prefilter)	U (Urethane) Standard on all sizes	
				Leave blank		100WS	1/4" - 1" port size: U (Urethane) For 2" leave blank (standard fluorocarbon end seals)	
				Leave blank		7CVP (only available on 2" port)	Leave blank (standard fluorocarbon end seals)	
				Leave blank		3P (Pleated Cellulose) Particulate element	1/4" - 1" port size: U (Urethane) 2" port size: V (Fluorocarbon)	
				Leave Blank		A (Adsorber)	1/4" - 1" port size: U (Urethane) 2" port size: V (Fluorocarbon)	

Examples: MN2S-6QUG
MN3L-3PUN
MN8S-6CVG
MN8S-7CVP

This (**G**) option is a great way to monitor pressure drop and determine when to replace the filter element.

How to Order Replacement Elements:

Housings are sold with one element. Build your own replacement element with the chart below:

Housing	Element Grade and Type	Element Size
M_1S M_15S M_2S	*C,*CU,*QU, 3PU, AU, 100WSU	10-025
M_1L M_15L M_2L	*C,*CU,*QU, 3PU, AU, 100WSU	10-050 (for 100WSU use 10-025)
M_3S M_4S	*C,*CU,*QU, 3PU, AU, 100WSU	15-060
M_4L	*C,*CU,*QU, 3PU, AU, 100WSU	15-095 (for 100WSU use 15-060)
M_8S	*CV,*QU, 3PV, AV, 100WS, 7CVP	25-130

Note: _insert port type. See How to Order above for more information.

1. Determine the housing you have by choosing from the "Housing" column on the chart.

2. Determine the element type and grade you need. *Insert grades 4,6,8 or 10 for C, CU, CV or QU. See pages 68-69 for more detail on grade selection.

3. Determine the corresponding element size by choosing from the "Element Size" column on the chart.

4. Combine "Element Grade and Type" designation with "Element Size" to get element part number.

Ex: 3PU10-025 or 6CU10-025

Element Box quantity depends on media type selected.

Mounting brackets available: MB-2 (1/4" - 1/2" port size)
BK-3 (3/4" - 1" port size)

1000 PSIG Pressure Filters

A*R

This robust but lightweight aluminum housing is designed especially for bypass gas sampling of specialty gases.

This lightweight, 1000 PSIG filter is constructed of aluminum and offers your choice of high efficiency particulate and coalescing filter elements. This product can be used for CNG or specialty gas applications. The A*R includes a drain port with a plug. The connection size of the drain port matches the inlet and outlet connection size, making it ideal for bypass gas sampling.

*specify part number A5R for 1/8" NPT connections or A1R for 1/4" NPT connections.

1200 PSIG Pressure Filters

SM-Series

Finite's stainless steel SM-Series housings are perfect for higher-pressure applications in corrosive working environments. Coalescing, particulate and adsorption filters are available. A threaded collar enables the user to easily remove the bowl for servicing, without having to remove the drain fitting and connections. The SM-Series has an SAE-4 drain port with plug.

Critical gas processing applications at elevated pressures rely on the SM-Series to provide clean, contaminant-free gas in corrosive environments.

CNG Filters

Ordering Information:

Series Name	Port Type	Port Size	Bowl	-	Element Grade	Element Type	End Seal	Accessories
SM	N (NPT)	1 (1/4") 2 (1/2")	S (Short) M (Medium) L (Long)		4 6 8 10	C (Coalescer) Q (Coalescer with built-in prefilter) G T F H	Leave blank for no end seal (Available on type G,T,F,H,C) U (Urethane end seals, available on types C,Q,3P,A)	N (No Accessories)
					Leave blank	3P (Pleated Cellulose) Particulate Element		
					Leave Blank	A (Adsorber)		

Examples: SMN2S-8GN
SMN1L-6CUN
SMN2M-3PUN
SMN1M-AUN

Mounting bracket available: MBS-2

How to Order Replacement Elements:

Housing	Element Grade and Type	Element Size
SMN1S, SMN2S	*C, *CU, *QU, *H, *F, *G, *T, 3PU, AU	10-025
SMN1M, SMN2M	*C, *CU, *QU, *H, *F, *G, *T, 3PU, AU	10-050
SMN1L, SMN2L	*C, *CU, *QU, *H, *F, *G, *T, 3PU, AU	10-070

Housings are sold with one element. Build your own replacement element using the steps below. Refer to the chart on the left.

- Determine the housing you have.
- Determine the element type and grade you need. *Insert grades 4,6,8 or 10. See pages 68-69 for more detail on grade selection.
- Determine the corresponding element size.
- Combine "Element grade and Type" designation with "Element Size" to get part number. For Example: 6QU10-050. Box quantity depends on media type selected.

3600 PSIG Pressure Filters

FFC-112

CNG powered vehicles such as airport shuttles and taxis use FFC-112 filters, which are installed on these vehicles. They protect critical engine components from contaminants present in CNG fuel.

CNG powered engine components such as fuel injectors and pressure reducing valves require contaminant free air. Submicronic solid or lubricant aerosols may carry over during CNG compression. Contaminants can also be generated in the storage and distribution of the natural gas, and may eventually enter the vehicle's storage tank. Both 1/4" NPT and 9/16" SAE connections are available on this 3600 PSIG rated assembly. The machined aluminum housing is anodized to enhance durability. It's robust yet small, lightweight size allows for versatile installation and easy servicing.

Specifications:

Model Number	Port Size	Max. Pressure	Max. Temp.	Materials of Construction			Seals	Sump Capacity	Weight	Dimensions	
				Head	Internals	Bowl				Length	Width
FFC-112	1/4" NPT	3600 PSIG (248 bar)	225°F (107°C)	Anodized Aluminum	Acetal Plastic	Anodized Aluminum	Buna-N	0.5 oz. (14.8 ml)	1.5 lbs. (0.68 kgs.)	4.75" (120.65mm)	2.25" (57.15mm)
FFC-112 SAE	9/16" SAE	3600 PSIG (248 bar)	225°F (107°C)	Anodized Aluminum	Acetal Plastic	Anodized Aluminum	Buna-N	0.5 oz. (14.8 ml)	1.5 lbs. (0.68 kgs.)	4.75" (120.65mm)	2.25" (57.15mm)

Flow Rates (SCFM):

Examples: FFC-112-6
or FFC-112 SAE-10

Replacement Elements Available:

Filter Housing Model	Media Grade 6	Media Grade 10
FFC-112/FFC-112 SAE	CLS112-6 X 10	CLS112-10 X 10

Note: X 10 in the part number denotes how many elements are sold in a Box.

Mounting bracket available: MB-2S

FFC-113

Many large CNG powered vehicles, such as buses used in city transit systems rely on FFC-113 filters, which are installed onboard the vehicle itself. They protect critical engine components from contaminants present in alternative fuel gas systems.

The FFC-113 is a popular filter choice onboard alternative fuel vehicles. Tiny solid and liquid contaminants can foul critical engine components, diminishing engine performance. These contaminants are typically generated during the compression, storage, and dispensing of alternative fuel gases like CNG. The FFC-113 removes sub-micronic contaminants with removal efficiencies from 95% to 99.97% ensuring long service intervals for components like fuel injectors.

Its robust 303 stainless steel construction and 3600 PSIG design pressure and relatively light weight combine to provide a unit that will withstand the harsh operating environments found on heavy duty vehicles like buses and trucks. It is supplied with 1/2" NPT connections and is designed for flows exceeding 1550 SCFM at 3600 PSIG.

High Pressure & CNG Filters

Specifications:

Model Number	Port Size (NPT)	Max. Pressure	Max. Temp.	Materials of Construction			Seals	Sump Capacity	Weight	Dimensions	
				Head	Internals	Bowl				Length	Width

5000 PSIG Pressure Filters

J-Series

J-Series filters are used in a number of applications, ranging from breathing air for scuba divers, to high-pressure hydraulic circuit testing, to a variety of uses in the alternative fuel industry.

Finite's J-Series is designed to filter contaminants such as rust and pipe scale, compressor lube oil, and water from compressed gases. These filters are often used in high pressure compressed natural gas (CNG) systems, not only as inter-stage filters in the multiple stage compression of the gas, but also in the storage and delivery of the gas to CNG powered vehicles.

Finite's varied media choices remove up to 99.995% of both solid and liquid aerosols, and contaminants as small as 0.2 microns in size. Additionally, cartridges are available with either silica gel or molecular sieve, these desiccants adsorb water vapor, drying the high pressure air or gas. An activated carbon media is also available which removes oil vapor. This stage of filtration is often used as the final filter before the storage of high pressure breathing air used by scuba divers, firefighters, and others that utilize portable breathing devices.

The filter housings and the replaceable elements used in this product line have an extremely robust construction, specially designed for use in system pressures up to 5000 psig. Four housing sizes and two thread styles (NPT or SAE) are available with connections ranging from ½" to 1 ½"; temperatures up to 350°F, and flows up to 20,000 SCFM at 5000 PSIG.

Specifications:

Model Number	Port Size	Max. Pressure	Max. Temp. for each Element Type	Materials of Construction			Seals	Sump Capacity	Weight	Dimensions	
				Head	Internals	Bowl				Length	Width
J2SD	SAE-8*	5000 PSIG (345 bar)	350°F (C, 3P, 100WS) 175°F (A)	Ductile Cast Iron	Aluminum	Carbon Steel	Fluoro-carbon	2.0 oz. (60 ml)	9.2 lbs. (4.2 kgs.)	8.1" (205.7 mm)	3.7" (94.0 mm)

*Note: Adapter bushings provided for ½" NPT female pipe connections.

How to Order:

Series Name	Port Size	Port Type	Bowl	-	Element Grade	Element Construction	Element Size
J	2 (1/2")	S (SAE-8) Note: 1/2" NPT adapter bushings included.	D (Standard) L (Extra Sump)		4C 10C 3P A	WC (metal retainers, bonded on end caps with positive o-ring seal)	11-035 (J2) 15-070 (J4) 23-130 (J6)
	4 (1")	N (NPT) S (SAE-16)	F (Standard)		Leave blank	100WS	
	6 (1 1/2")	N (NPT) S (SAE-24)	H (Standard)		10J (Available on 1" and 1 1/2" port only)	WM (desiccant dryer with molecular sieve) WA (desiccant dryer with activated aluminum)	

Examples: J2SL-10CWC11-035
J4NF-4CWC15-070
J6SH-3PWC23-130

High Pressure &
CNG Filters

How to Order Replacement Elements:

1. Determine the housing you have by choosing from the "Housing" column on the chart.
2. Determine the "Element Grade and Type" you need. See pages 68-69 for more detail on grade selection.
3. Determine the corresponding element size by choosing from the "Element Size" column on the chart.
4. Combine "Element Grade and Type", "Element Size" and "Box Quantity" get part number.

Example: 4CWC15-070 X 2 or 3PWC23-130 X 1

Housings are sold with one element. Build your own replacement element with the chart below.

Housing	Element Grade and Type	Element Size	X	Box Quantity
J2SD, J2SL	4CWC, 10CWC, 3PWC, AWC, 100WS	11-035		4
J4NF, J4SF	4CWC, 10CWC, 3PWC, AWC, 100WS, 10JWM, 10JWA	15-070		2

Scuba divers rely on clean, dry air to fill their air tanks. Finite filters ensure that any impurities, such as oil, water or particulate are removed before entering the tanks.

5000 PSIG Pressure Filters

S*R

These robust, corrosion resistant filters are ideal for ultrafine filtration of specialty gases.

Measuring only four inches in height, these filters are ideal for bypass gas sampling applications. The drain port (plugged) connection size matches the inlet/outlet connection size. The corrosion resistant materials used for this model lend themselves to extreme operating environments.

*specify part number S5R for 1/8" NPT connections or S1R for 1/4" NPT connections.

High Pressure & CNG Filters

5000 PSIG Pressure Filters

S1IL

The S1IL is often used on specialty gas analyzers or to remove particulate contamination from bottled gases.

Finite's S1IL particulate filter is typically applied in bottled gas applications or for sample preparation on gas analyzing equipment. It does not have a drain port and should only be used when little or no liquid contamination is expected. Though small in size, the S1IL is perfect for applications with elevated pressures or corrosive atmospheres and offers the availability of a high temperature element. Three high efficiency particulate elements are available for temperatures rated up to 400°F.

Specifications:

Model Number	Port Size (NPT)	Max. Pressure	Max. Temp. for each Element	Materials of Construction			Seals	Sump Capacity	Weight	Dimensions

For more information on element selection, please see pages 68-69.

Elements are sold in Box quantities of 10.

FFC-116

Many CNG powered commuter vehicles, such as shuttle buses, taxis or vans, rely on FFC-116 filters to protect contaminants from fouling fuel injector systems. Both solid and liquid contaminants can enter the system from various sources.

This stainless steel filter is commonly used to filter oil, water and particulate from lower flow CNG systems and onboard CNG vehicles. Its small size allows for installation versatility and ease of servicing. The 316 stainless steel construction resists corrosion. Its 5000 PSIG design enables it to be used on the high pressure side of a CNG system, protecting both the regulator and the fuel injectors. The sump capacity is 0.25 oz. (7.4 cc) for fluid contaminants, which can be drained through a plugged 1/4" NPT drain port.

High Pressure & CNG Filters

Specifications:

Model Number	Port Size (NPT)	Max. Pressure	Max. Temp.	Materials of Construction			Seals	Sump Capacity	Weight	Dimensions	
				Head	Internals	Bowl				Length	Width
FFC-116	1/4"	5000 PSIG (345 bar)	350°F (177°C)	316 Stainless Steel	316 Stainless Steel	316 Stainless Steel	Fluoro-carbon	0.25 oz. (7.4 ml)	1.16 lbs. (0.53 kgs.)	4.0" (101.6mm)	1.75" (44.5mm)

Note: X 10 in the part number denotes how many elements are sold in a box.

Mounting bracket available: MBS-1

6000 PSIG Pressure Filters

SJ-Series

This robust, stainless steel filter is rated for working pressures up to 6000 PSIG, which makes this the filter of choice for extremely demanding applications. The SJ-series comes in a variety of port sizes and types, reducing the need for extra piping or the use of adapters in your application. The 1/4" drain port allows the user to drain all oil from the assembly prior to servicing, eliminating possible cross contamination and leaving a cleaner environment. Use this filter for your offshore applications, water fogging, caustic washdowns (food processing) or on high pressure test stands. A wide variety of filter element media grades and styles means that your application needs will be efficiently met.

Specifications:

Model Number	Port Size (NPT or SAE)	Max. Pressure	Max. Temp. for each Element Type	Materials of Construction			Seals	Sump Capacity	Weight	Dimensions		Replacement Element Size
				Head	Internals	Bowl				Length	Width	
SJN*S, SJS*S	1/2"-1"	6000 PSIG (414 bar)	175°F (Grade A) 350°F (All other grades)	316L Stainless Steel	316L Stainless Steel	316L Stainless Steel	Fluoro-carbon	2.1 oz. (61 ml)	14 lbs. (6.4 kgs.)	8.26" (210mm)	4.00" (102mm)	11-036

*insert port size: 2 = 1/2", 3 = 3/4" and 4 = 1"

How to Order:

Series Name	Port Type	Port Size	Bowl	Element Grade	Element Construction	Accessories
SJ	N (NPT) S (SAE)	2 (1/2") 3 (3/4") 4 (1")	S (Standard) L (Long bowl, short element, extra sump) H (High Flow: Long bowl, long element)	4C	WC (metal retainers, bonded on end caps with positive o-ring seal.)	N (No Accessories) Examples: SJN2S-4CWCN SJS3L-3PWCN
				10C		
				3P A 100WS	Leave blank	

How to Order Replacement Elements:

Housings are sold with one element. Build your own replacement element with the chart below.

Housing	Element Grade and Type	Element Size
SJN*S, SJS*S, SJN*L, SJS*L	4CWC, 10CWC, 3PWC, AWC, 100WS	11-036
SJN*H, SJS*H	4CWC, 10CWC, 3PWC, AWC, 100WS	11-072

1. Determine the housing you have by choosing from the "Housing" column on the chart. Insert port size. See How to Order above for more info on port sizes.
2. Determine the "Element Grade and Type" you need. See pages 68-69 for more detail on grade selection.
3. Determine the corresponding element size by choosing from the "Element Size" column on the chart.
4. Combine "Element Grade and Type", "Element Size" and then add Box quantity to the end. Box quantities are all X 4, except 100WS which is X 1. Example: 4CWC11-036 X 4 or 100WS11-072 X 1.

Use a high pressure drain kit with Finite's SJ-Series... see page 88!

High Pressure &
CNG Filters

High Pressure Drain Kits

Product Overview

High pressure compressed gas systems oftentimes contain excessive amounts of liquid aerosols. This liquid can best be removed by utilizing Finite's J-Series or SJ-Series coalescing filters. A Grade 10 filter followed by a Grade 4 filter will remove greater than 99.995% of the liquid water and/or oil carryover from the compressed gas system. This liquid can now be safely removed with Finite's NEW High Pressure Drains (JDK and SJDK Series)! These drains are fully-assembled and are constructed of 316 Stainless Steel. They include two needle valves, fittings, and a pipe reservoir.

The JDK Series is rated for 5000 PSIG and connects directly to the bottom of the J-Series filter housings. The SJDK Series is rated for 6000 PSIG and connects directly to the bottom of the SJ-Series housing. These High Pressure Drains are offered in both vertical and horizontal orientations. The vertical orientation is ideal for applications in which there is adequate bowl removal clearance, while the horizontal orientation is ideal for applications with limited bowl removal clearance.

A direct connection

Finite's drain kits can be used in many high pressure air or gas system. They can also be used to hook up directly to Finite's J-Series (pages 80-82) or Finite's SJ-Series (pages 86-87).

Finite's J-Series

Finite's SJ-Series

Operation

Finite's new High Pressure Drains allow the user to safely remove condensate from a high pressure compressed gas system. Proper operation of the drain involves keeping the first needle valve open and the second needle valve closed. The liquid that is coalesced from the filter will empty into the drain's high pressure reservoir and fill the internal volume with liquid.

When it is time to expel the liquid from the drain kit (usually on a preventative maintenance schedule), the top needle valve should be closed to shut off system pressure. The bottom needle valve should then be opened **SLOWLY** since the liquid will discharge rapidly from the drain. This procedure should be repeated until all of the liquid has been removed from the filter bowl and drain reservoir.

All liquid should be collected and disposed of in accordance with local regulations.

**JDK5000V/
SJDK6000V**

**JDK5000H/
SJDK6000H**

Part Number	Description	Inlet	Outlet	Max Pressure	Max Temp.
JDK5000V	Vertical J-Series Drain	SAE-6	1/4" NPT	5000 PSIG (345 bar)	100°F (38°C)
JDK5000H	Horizontal J-Series Drain	SAE-6	1/4" NPT	5000 PSIG (345 bar)	100°F (38°C)
SJDK6000V	Vertical SJ-Series Drain	SAE-4*	1/4" NPT	6000 PSIG (414 bar)	100°F (38°C)
SJDK6000H	Horizontal SJ-Series Drain	SAE-4*	1/4" NPT	6000 PSIG (414 bar)	100°F (38°C)

*The SAE-4 fitting can be removed to adapt to 1/4" NPT.

ADS-50

304 Stainless Steel
Automatic Drain Trap

Specifications:

Max Temperature:	450°F (232°C)
Max Pressure:	250 PSIG (17 bar)
Connections:	1/2" NPT inlet and outlet

TD-50

Adjustable Timed Drain Valve

Specifications:

Max Temperature:	150°F (66°C)
Max Pressure:	600 PSIG (42 bar)
Connections:	1/2" NPT inlet and outlet

TV-25-700

Timed Drain Valve

Specifications:

Max. Temperature:	210°F (99°C)
Max. Pressure:	700 PSIG (48 bar)
Connections:	1/4" NPT

DPI-25

Differential Pressure Gauge

Specifications:

Max. Temperature:	200°F (88°C)
Max. Pressure:	5000 PSIG (340 bar)
Connections:	1/4" NPT

Other options available:

- BDPI-25 (DPI-25 with mounting brackets)
- DPS-25 (DPI-25 with SPST reed switch included)
- BDPS-25 (DPS-25 with mounting brackets)

DPG-15HP

Differential Pressure
Gauge

Specifications:

Max. Temperature:	200°F (93°C)
Max. Pressure:	800 PSIG (55 bar)
Connections:	Holes on M-Series housing must be predrilled

CAUTION

Polycarbonate bowls, being transparent and tough, are ideal for use with filters and lubricators. They are suitable for use in normal industrial environments, but should not be located in areas where they could be subjected to direct sunlight, an impact blow, nor temperatures outside of the rated range. As with most plastics, some chemicals can cause damage. Polycarbonate bowls should not be exposed to chlorinated hydro-carbons, ketones, esters and certain alcohols. They should not be used in air systems where compressors are lubricated with fire resistant fluids, such as phosphate ester and di-ester types.

Metal bowls are recommended where ambient and/or media conditions are not compatible with polycarbonate bowls. Metal bowls resist the action of most such solvents but should not be used where strong acids or bases are present or in salt laden atmospheres. Consult the factory for specific recommendations where these conditions exist.

TO CLEAN POLYCARBONATE BOWLS, USE MILD SOAP AND WATER ONLY! DO NOT use detergents or cleansing agents such as acetone, alcohol, benzene, carbon tetrachloride, gasoline, toluene, etc., which are damaging to this plastic.

Bowl guards are recommended for protection of polycarbonate bowls where chemical attack may occasionally occur.

Metal bowl guards are recommended for all applications.

WARNING

To avoid polycarbonate bowl rupture that can cause personal injury or property damage, do not exceed bowl pressure or temperature ratings. Polycarbonate bowls have a 150 PSIG pressure rating and a Maximum temperature rating of 125°F.

¹Tested per ADF 400 at 40 ppm inlet.

²Add dry + wet for total pressure drop.

Grade 6: General air coalescing applications when total removal of liquid aerosols and suspended fines is required in all pressure ranges. Protection of air gauging, air logic, modulating systems, critical air conveying, most breathing air systems, etc.

Grade 10: Precoalescer or prefilter for Grade 6 to remove gross amounts of water and oil, or tenacious aerosols which are difficult to drain. Upgrading existing particulate equipment to coalescing without increase in pressure drop.

Coalescing Applications

- Dryer protection
- Paint spray booths
- Breathing air
- Tool protection
- Valve protection
- Cylinder protection
- Compressed air system protection

Modular Accessories

Body Connectors allow you to easily assemble and disassemble Modular Combinations.

Each Kit includes one set.

Body Connectors are required whenever you assemble two or more pieces together.

Series	Part Number
F05	PS954P
F06	PS754P
F07	PS854P

Port Block Connectors allow you to make threaded port connections to Modular units and are available in various port sizes to match your system requirements.

Each kit includes all the necessary pieces to make two port connections.

Port Size	F05	F06	F07
1/8"	PS95000P	N/A	N/A
1/4"	PS95001P	PS750P	PS850P
3/8"	PS95002P	PS751P	PS851P
1/2"	N/A	PS752P*	PS852P
3/4"	N/A	N/A	PS853P

* Use 1/4" or 3/8" ported bodies

The flexible collar design allows for easy service and conversions. Metal bowls with sight gauge have 360° adjustment capability to allow viewing from any angle.

Auto Drains allow unattended removal of liquids while providing a positive shutoff against leakage.

Pressure Gauges allow you to accurately monitor your system pressure. Two pressure ranges are available to better match your system requirements.

Range	Series	Part Number
0-60 PSIG	F05	K4520N14060
	F06/F07	K4520N14060
0-160 PSIG	F05	K4520N14160
	F06/F07	K4520N14160

High efficiency depth and coalescing filtration for the most demanding applications. Available in .01, 1 and 5 micron sizes.

Wall Mounting Kits are available for mounting your Modular Assemblies and can be assembled and used with any standard body connector set. Since Modular Combinations are always identical in size, you can predrill for wall mounting on your equipment.

Kit includes 1 assembly.

Series	Part Number
F05	PS955P
F06 and F07	PS755P

Patent Pending

Lockout Valves provide positive shutoff and Exhaust capability to isolate Modular units so they can be easily removed from the line and can be locked in a closed position. Center position can be used as a slow start.

NOTE: Body Connectors are not supplied with Lockout Valves.

Series	Porting	Part Number
F05	1/4"	PS95601P
F06	3/8"	PS756P
F07	1/2"	PS856P

A Modular Manifold Block can be used between any two Modular units to give additional outlet ports. The Manifold Block provides 2 additional outlets in 3/8" and 1/2" sizes. Any standard pipe plug can be used to close off unused ports. **NOTE:** Body Connectors are not supplied with Manifold Blocks.

Series	Porting	Part Number
F05	1/4"	PS95701P
F06	3/8"	PS757
F07	1/2"	PS857

Options For Modular Combinations and Close Nippled Combinations

- For poly units with automatic drain and bowl guard, change the 6th space from a "2" to an "6". Example: F16G16B13A2B
- For metal bowl units with automatic drain and sight gauge, change the 6th space from a "4" to an "8". Example: F16G18B13A4B

Air Line Accessories

Timed Drain Valve (TV-25/TV-50)

Features

- 300 (20 bar) PSIG with 700 (48 bar) PSIG available
- Compact design
- Temperature: 210°F (99°C)

Metal Sump Drain (MS-50)

Features

- Auto-drain ported 1/8" to pipe away liquid
- Drain has manual override
- Easily serviced without tools
- 10-250 PSIG range
- Compact size

How Air Line Filters Work

Miniature

F05F

F06F

First Stage Filtration:

Air enters at inlet port and flows through detector plate (A) which causes a swirling action. Liquids and coarse particles are forced to the bowl interior wall (B) by the centrifugal action of the swirling air. They then carry down the bowl wall by the force of the gravity. Shroud (C) assures that the proper swirling action occurs and that the air does not pass directly through the filter element (D) until the large particles and liquids are removed. The baffle (E) separates the lower portion of the bowl into a "quiet zone" where the removed liquids and particles collect, unaffected by the swirling air, and are therefore not re-entrained into the flowing air.

Second Stage Filtration:

After liquids and large particles are removed in the first stage of filtration, the air flows through element (D) where smaller particles are filtered out and retained. The filtered air then passes downstream. Collected liquids and particles in the "quiet zone" should be drained before their level reaches a height where they would be re-entrained in the flowing air. This can be accomplished by the twist drain (F) which is actuated by twisting knob (G) counterclockwise.

F07F

FP3NF

How Coalescing Filters Work

Miniature

The contaminated air enters the element interior and is forced through a thick membrane of borosilicate glass fibers coated with epoxy (**A**). Flow then passes through an outer structural support and, at this stage, has removed up to 99.97% + of the sub-micron particles evident in the contaminated air. These tiny droplets coalesce together and are blotted from the filter surface by the drain and release layers of non-woven glass felt and polyester. The drops now begin a gravitational passage to the filter sump (**B**) where they can be manually or automatically drained.

The clean, filtered air now passes through the outer screen plastic net and out into the pneumatic system. The Air Line Coalescing Filter removes liquid aerosols and sub-micron particulate matter.

Collected liquids and particles in the "quiet zone" should be drained before their level reaches a height where they would be re-entrained in the flowing air. This can be accomplished by the manual drain (**C**) which is actuated by twisting knob (**D**) counterclockwise.

F15F

F11F

F12F

How Air Line Regulators Work

Miniature

**F05R, F06R,
F07R**

With the adjusting knob **(A)** turned fully counterclockwise (no spring load), and pressure supplied to the regulator inlet port, the valve poppet assembly **(B)** is closed. Turning the adjustment knob clockwise applies a load to control spring **(C)**. This load causes the piston/diaphragm **(D)** and the valve poppet assembly **(B)** to move downward allowing flow across the seat area **(E)** created between the poppet assembly and the seat. Pressure in the downstream line is sensed below the piston/diaphragm **(D)** and offsets the load of spring **(C)**. As downstream pressure rises, poppet assembly **(B)** and control piston **(C)** move upward until the area **(E)** is closed and the load of the spring **(C)** and pressure under piston/diaphragm **(D)** are in balance. A reduced outlet pressure has now been obtained, depending on spring load. Creating a demand downstream, such as opening a valve, results in a reduced pressure under the piston/diaphragm **(D)**. The load of control spring **(C)** now causes the poppet assembly to move downward opening seat area **(E)** allowing air to flow to meet the downstream demand. The flow of downstream air is metered by the amount of opening **(E)**.

During low flow requirements, the amount of opening at the seat **(E)** is small, while at high flows it is large. The downstream pressure signal, which regulates the amount of opening, required an adjustment over this range, in order to attempt a constant output. This adjustment is the orifice **(G)**, which is sized and located in such a manner as to provide a compensation to the downstream pressure signal transmitted to the piston. This effect is called aspiration and its effect is to maintain downstream pressure nearly constant over a wide range of flow demands.

Should downstream pressure exceed the desired regulated pressure, the excess pressure will cause the piston/diaphragm **(D)** to move upward against control spring **(C)**, open vent hole **(F)**, and vent the excess pressure to atmosphere through the hole in the bonnet **(H)**. (This occurs in the relieving type regulator only.)

How Air Line Lubricators Work

F04L

F15L/F16L/F17L

FP3NL

Air flowing through the unit goes through two paths. At low air flow rates, the majority of the air flows through venturi section (A). The rest of the air slightly deflects and flows by the flapper (B), restrictor disc (M) on F04L. The velocity of the air flowing through venturi section (A) creates a pressure drop at throat section (C). This lower pressures allows oil to be forced from the reservoir through the pickup tube (D) past the check ball (E), to the dome assembly where the rate of oil flow is controlled by metering screw (F). Rotation of the metering screw (F) in the counterclockwise direction increases the oil flow rate; in the clockwise direction decreases the oil flow rate.

Oil then flows through the clearance between inner and outer sight domes (G) where drops are formed and drip into the nozzle tube (H). Here it is then broken into fine particles as it expands into the low pressure venturi. From there, the atomized oil flows through the precision orifice (J). On the F04L, it flows through the curved scoop (L) and is deflected against the interior wall of the reservoir. This action causes the larger particles of oil to fall back into the reservoir where it can recirculate through the system. The remaining mist of fine particles (5 micron or smaller – about 3% of which passed through the sight dome) is then carried through the opening (K) where it joins and mixes with air that bypassed the flapper (B), (M). As air flow rate increases, the flapper (B), (M) deflects, allowing most of the inlet air to bypass the venturi section (A). However, a proportion of the inlet air passes through the venturi, assuring that oil delivery increases linearly with increased air flow rate. This proportioning method is advantageous at low inlet air flows because the venturi design remains efficient.

The check ball (E) prevents reverse oil flow down the pickup tube when air flow stops. Thus, oil delivery can resume immediately when air flow restarts. Micro-mist Lubricators can only be filled when the air supply is shut off.

Stainless Steel Air Preparation Units

Filters, Regulators and Lubricators

Bulletin 1300 - 775/USA

FRL's & Vacuum
Exhaust Filters

Finite®

1/4" and 1/2" Stainless Steel Filters, Regulators, Lubricators: **Performance you can count on!**

Parker Hannifin has specifically designed a line of 316 Stainless Steel Filter, Regulator, Lubricator (FRL) components that meet NACE specifications and handle the toughest and most corrosive environments. The regulator diaphragm to valve area ratio is large to assure precise pressure regulation and high flow capacity.

Of the major American FRL manufacturers, Parker provides the most comprehensive line

of miniature Stainless Steel components and has installed stainless steel FRLs worldwide. We use the latest techniques in design and manufacturing to meet today's stringent standards. You are assured of outstanding performance and long life from the stainless steel FRLs offered by Finite, thanks to our high quality materials, tough quality control checks and decades of experience in manufacturing FRLs.

Stainless Steel FRLs in this pharmaceutical plant are used for valve protection and lubrication at point of use applications.

Applications

- Marine and Offshore Facilities
- Chemical and Petroleum Plants
- Process Industries
- Pollution Control
- Instrumentation
- Medical
- Pulp and Paper Products
- Research Labs
- Wastewater Treatment

This oil refinery uses stainless steel filters, regulators and lubricators for protecting instrumentation and pneumatic equipment in corrosive environments.

Eliminates unwanted oil mist and reduces exhaust noise

from pneumatic valves, cylinders and air motors.

Features:

- 99.97% oil removal efficiencies
- 25 dBA Noise attenuation
- 1/2" and 1" NPT
- Disposable Units
- Continuous or plugged drain option
- Metal retained UNI-CAST construction
- Fast exhaust time
- BSP (G) Thread option

FRL's & Vacuum
Exhaust Filters

Improve Overall Plant Environment

Exhaust oil mist and noise pollution can have a direct impact on a worker's productivity and their environment.

Oil aerosol mist from lubricators and compressors enters the industrial plant environment through the exhaust ports of valves, cylinders and air motors. Rapidly expanding exhaust from valves, cylinders and air motors also produces sudden and excessive noise.

Finite's Exhaust Coalescing Silencer (ECS) is 99.97% efficient at removing the oil aerosols. The ECS also acts as a silencer to lower the dBA levels to below O.S.H.A. requirements.

The result is a cleaner, quieter, environment which equates to greater work productivity and safety.

Finite® Technology

ECS units are constructed from the same materials that are used with our oil removal coalescing filter elements. Finite's UNI-CAST seamless design ensures media uniformity and strength. This proven technology provides high coalescing efficiency with low pressure drop.

The filter media is supported by cylindrical perforated steel retainers both inside and out. These galvanized retainers make for excellent corrosion resistance and give Finite's ECS units high rupture strength in either flow direction. ECS units can also be used as high efficiency inlet or bypass filters for vacuum pumps, or as breather elements to protect the air above critical process liquids.

How It Works

Compressor oils and lubricating oils are exhausted from valves, cylinders and air motors into the ECS. Oil aerosols are coalesced into larger droplets and gravity pulls them into the attached drain sump. The sump can then be drained manually or by using a 1/4" ID plastic tube drain. The air flowing into the ECS is also muffled as it enters the inside of the ECS and passes through the filter media into the atmosphere.

Flow vs. Noise Level

Flow vs. Back Pressure

Performance Specifications:

Maximum operating temperature: 125°F/52°C

Maximum Line Pressure: 100 PSIG/7bar

Dimensions:

Model Number	A	B	C
ECS-2	5.3" (135mm)	1/2" NPT	2.57" (65mm)
ECS-4	7.3" (185mm)	1" NPT	2.57" (65mm)
ECSB-2	5.3" (135mm)	1/2" BSP	2.57" (65mm)
ECSB-4	7.3" (185mm)	1" BSP	2.57" (65mm)

Typical Applications:

- Valve Exhaust
- Cylinder Exhaust
- Air Motor Exhaust
- Noise Reduction
- Oil Mist Elimination
- Safer Work Environment
- Tank Vents
- Vacuum Exhaust

Ordering Information:

Use the following model numbers to place an order:

ECS-2 X 1 (1/2" NPT)

ECS-4 X 1 (1" NPT)

ECS-2 X 6 (1/2" NPT - Carton of 6)

ECS-4 X 6 (1" NPT - Carton of 6)

For BSP Porting:

ECSB-2 X 1 (1/2" BSP - Parallel (G))

ECSB-4 X 1 (1" BSP - Parallel (G))

ECSB-2 X 6 (1/2" BSP - Parallel (G) - Carton of 6)

ECSB-4 X 6 (1" BSP - Parallel (G) - Carton of 6)

Vacuum Pump Exhaust Filters

- Eliminate 99.9% oil mist and smoke from vacuum pump Exhaust
- Easily adapts to most vacuum pumps
- Flows to 200 CFM

Bulletin 1300 - 310/USA

Finite®

What is a vacuum pump and what are they used for?

Applications:

Industrial Vacuum Processes

Pharmaceutical

Medical

Food Processing

Meat Packaging

Factory Automation

Pneumatic Conveying

Chemical Processing

Print Production

Woodworking

High Quality, Low Maintenance

Vacuum pumps are used in a variety of applications from manufacturing processes to medical devices. In general, a vacuum pump provides high quality, reliable performance and is a low maintenance piece of equipment.

How it Works

Vacuum pumps convert mechanical energy into pneumatic energy by evacuating the air contained within a system. They use the same pumping mechanism as air compressors except that the unit is installed so that the air is drawn from a closed volume and Exhausted to the atmosphere.

In a compressed air system the compressor inlet is usually at atmospheric pressure, whereas in a vacuum system, the outlet is at atmospheric pressure.

"In general, a vacuum pump provides high quality, reliable performance and is a low maintenance piece of equipment."

Lubricated vs. Non-lubricated

Pumps are generally offered in an oil-less or oil-lubricated version. Oil-lubricated vacuum pumps have many advantages if they are properly maintained. They can usually provide 20% higher vacuum because the lubricant acts as a sealant. The life of an oil-lubricated vacuum pump is usually extended by 50% due to cooler operation and better protection against corrosion from condensed water vapor.

All Pumps Require Filtration Protection

A vacuum pump, whether it is oil-less or not, requires Exhaust filtration protection. One requirement of vacuum pump maintenance is making sure that the operator provides and maintains a filter for the vacuum Exhaust. Regardless of the type of vacuum pump you have, using a Finite Exhaust filter will ensure a cleaner work environment.

Why filter vacuum pump Exhaust?

Put 99.9% clean air into YOUR work environment

A vacuum pump will Exhaust smoke and visible oil mist into the air. Installing a Finite Exhaust filter will eliminate 99.9% of the oil mist and smoke from vacuum pump Exhaust. This will prevent oil accumulation in the ambient air, which could otherwise cause health hazards for employees and potential violations from OSHA and the EPA.

Eliminate oil in duct work

When oily air is emitted from a vacuum pump, the contaminants are circulated throughout the building through the duct work. This can create dirty intake air for other equipment such as air compressors, packaging machines, etc.

Recover expensive lubricating oils

Oil prices have risen dramatically in the past few years. Your Finite vacuum pump Exhaust filter can recover expensive lubricating oils and return filtered oil back to the pump. This reduces overall maintenance costs.

How to Choose a Finite Vacuum Pump Exhaust Filter

For most applications, simply select the filter assembly which has a flow capacity equal to or greater than the vacuum pump Exhaust flow output (see chart to the right). The filter assemblies are shipped with installed filter cartridges, pressure gauge, and stainless steel mesh final filter pad (20 cfm and larger). Finite vacuum Exhaust filters can be easily adapted to any vacuum pump with readily available connection fittings.

FVE200N	RVE20-187 (need 7)	19206	20222 (need 2)	20217	19202

*Note: Element bypass valve assembly prevents backpressure buildup at the outlet of the vacuum pump.

Look inside a Finite Exhaust filter...

In standard models FVE020N-FVE200N, the elements are covered by a stainless steel mesh pad. Remove the mesh pad to expose the elements for maintenance and filter replacement. This photo does not show the optional cover.

The elements are installed in the housing. They are held in place by a center rod and threaded end cap. This design allows for easy element changeout. The inlet is on the bottom of the housing and the air flows from the inside to the outside. The coalesced liquid collects at the bottom of the internal separator plate and can be easily drained away.

Compressed Air & Gas Desiccant Dryers

For Point of Use and OEM Applications

Bulletin 1300 - 850/USA

Finite®

FDD DESICCANT DRYER SERIES

- 1/4" to 1" NPT Ports
- Capacities to 60 SCFM
- Pressure Dewpoints Down to -40° F

Finite® Filter's unique in-line air/gas dryer system is engineered for easy desiccant changeouts, longer life and lower pressure drop.

The FDD Series is designed to remove water vapor and aerosols at point-of-use for intermittent flows up to 60 SCFM. Finite dryers do not require steady flow for constant dewpoint suppression.

A color changing moisture indicator with visual sight gauge indicates the need for desiccant replacement.

STANDARD FEATURES

- Zinc Head/Steel Bowl with Integral Sightglass
- Sintered Bronze Elements (prevent desiccant carry over)
- Collar Designed for Easy Changeouts
- Maximum Operating Temperature: 180° F
- Maximum Working Pressure: 300 PSI
- Optimum Working Temperature: Below 100° F

The new FDD Series offers clean dry air for intermittent usage.

APPLICATIONS

- Intermittent Air Use
- Clean, Dry Air for Pneumatic Applications
- Instrument Protection
- Air Tools Protection Against Gumming and Oxidation
- Auto Body Paint Systems - Helps Prevent Fish Eye Defects
- Valve Actuation - Instrument Air

DESICCANT TYPES

SILICA GEL — Finite Filter's 100 percent indicating silica gel provides Maximum moisture adsorption and dewpoints down to -40° F.

Silica Gel a popular choice for the FDD series.

Outstanding features of Silica Gel include:

- High adsorption capacity - average surface area for each bead is over 200 ft²
- Low abrasion, due to high mechanical strength for long service life
- Ideal packing in bowl due to bead shape
- Uniform color change
- Excellent regeneration characteristics

As the silica beads adsorb moisture, they change from blue to pink, indicating the need for replacement or regeneration. The desiccant can be regenerated by heating in a drying oven to a temperature higher than 212° F but not over 350° F. Desiccant may also be regenerated in microwave ovens.

MOLECULAR SIEVE — Molecular sieves are crystalline, metallic aluminum silicates. The type 4A offers exceptional water vapor adsorption characteristics. Dewpoints are attainable to -40° F.

RECOMMENDED INSTALLATION

- Always place a moisture separator and/or pre-coalescing filter upstream to remove bulk liquids
- Always place a coalescing filter upstream to remove oil. Desiccant coated with oil will not adsorb moisture
- A 3 micron (or better) particulate filter is recommended downstream to remove desiccant dust in critical applications

WHY Finite® DESICCANT DRYERS?

Finite® desiccant dryers are the simplest and most reliable method of ensuring your sensitive pneumatic equipment is not exposed to damaging moisture. When air is compressed, the temperature of air is increased as is its capacity to hold moisture. As the hot moist air travels downstream through the pipelines, it cools, allowing the moisture to condense. Aftercoolers, filters, drain traps and drip legs are effective for removing condensate. For removing residual water vapor and aerosols, use the Finite desiccant dryer.

FDD15

- 1/4" - 3/4" NPT
- Flows to 15 SCFM
- Low Flow Intermittent Use

FDD30

- 3/8" - 1" NPT
- Flows to 30 SCFM
- Medium Flow for Intermittent Use or Longer Time Between Desiccant Changeouts

FDD60

- 1/2" - 1" NPT
- Flows to 60 SCFM
- For Intermittent Use or Longer Time Between Desiccant Changeouts

How Do THEY WORK?

As the wet compressed air flows through the inlet port and down through the bed of desiccant, the desiccant beads adsorb the water vapor and aerosols. The silica gel beads are so effective in adsorption, the air humidity can be reduced to a -40° F pressure dew point. Unless your compressed air is exposed to a temperature below the dewpoint, there will be no further condensation forming in your air lines.

After the moisture has been removed, the dry air passes through a sintered bronze element, up the center tube, and exits through the outlet port. As long as the desiccant is replaced regularly, your equipment will receive ultra dry, moisture-free air.

This sight gauge shows the color of the silica gel. When the gel turns from blue to pink, it is time to change the desiccant.

DIMENSIONS

	A*	B*	C	D	E	Weight
FDD15	4 15/16	4 1/16	13/16	12 11/16	13 1/2	8 lbs.
FDD30	4 15/16	4 1/16	13/16	22 7/16	23 1/4	13 lbs.
FDD60	4 15/16	4 1/16	13/16	29 7/16	30 1/4	20 lbs.

*Dimensions A & B do not include reducer bushings

Note: Weight is for housing only. Bowl removal requires a minimum of 2".

ORDERING INFORMATION

MODEL No. HOUSING ONLY**	PIPE SIZE (NPT)	FLOW CAPACITY	BOWL CAPACITY DESICCANT (LBS)
FDD15-02*	1/4"	15 SCFM	2 1/2
FDD15-03*	3/8"	15 SCFM	2 1/2
FDD15-04*	1/2"	15 SCFM	2 1/2
FDD15-06	3/4"	15 SCFM	2 1/2
FDD30-03*	3/8"	30 SCFM	5

FDD30-06	3/4"	30 SCFM	5
FDD30-08	1"	30 SCFM	5
FDD60-04*	1/2"	60 SCFM	10
FDD60-06	3/4"	60 SCFM	10
FDD60-08	1"	60 SCFM	10

*These dryers supplied with reducer bushings.
**Desiccant sold separately.

PERFORMANCE

The flow capacities in the table are nominal ratings provided for reference. These capacities are recommended for minimal pressure drop and average desiccant life. A supply of low flow/low humidity air will provide longer desiccant life, whereas high flow/high humidity air will require more frequent desiccant changes.

Installed in an application with intermittent flow, Finite desiccant dryers will typically dry air for weeks before the silica gel desiccant requires replacement or regeneration.

DESICCANT TYPE	5 LB CAN	MASTER PACK 4x5 LB CAN
Silica Gel (all indicating)	FSGM100-1	FSGM100-4
Molecular Sieve (non-indicating)	FMS100-1	FMS100-4

For detailed performance curves,
please contact **Finite® Filter**.

SPARE PARTS

MODEL NUMBER	REPAIR KIT	ELEMENTS
FDD15	FRKDD15-02-06	F504Z77-90
FDD30	FRKDD30-03-08	F504Z77-90
FDD60	FRKDD60-03-08	EK602B-BR

Note: A repair kit consists of a filter element, filter retainer, o-ring, stud, bottom nut, PVC tube and a strainer.

DID YOU KNOW?

When a grade 6 microglass coalescer is installed ahead of an FDD Dryer, 99.97% of all contaminants are removed and desiccant life is greatly enhanced.

Compressed Air Hollow Fiber Membrane Dryers

Bulletin 1300 - 800/USA

Dryers

Finite®

FMD-Series Hollow Fiber Membrane Technology

Finite®, the world leader in coalescing media development, has combined its proven coalescing filtration with a modern alternative to pressure swing and refrigerant dryer technologies.

Finite®'s membrane dryers are available in 10 models which can supply clean, dry compressed air with dewpoints as low as -40°F (@10 SCFM) and +35° F (@40 SCFM).

These membrane dryers are engineered for easy installation, minimal maintenance, and long term reliability.

How It Works:

The water vapor in the compressed air is removed by the principle of selective permeation through a membrane. The membrane module consists of bundles of hollow membrane fibers, each permeable to water vapor. As the compressed air passes through the center of these fibers, water vapor permeates through the walls of the fiber. A small portion of the dry air (purge flow) is redirected along the outside of each hollow fiber, carrying away the moisture-laden air which is then Exhausted to room atmosphere. The remainder of the dry air is piped to the application.

NOTE: In all cases a Grade 10 prefilter and a Grade 6 coalescer are installed upstream of the dryer module for 99.9985% removal of oil aerosols and mists.

Applications

- Air bearings
- Analytical instrumentation
- Coordinate measurement machines (CMM)
- Dental air
- Dry air for hazardous areas
- Electrostatic painting
- General laboratory air supply
- Laboratory grade air
- Laser and optical purge
- Low dewpoint instrument air
- OEM machine builders
- Pneumatic equipment
- Prevention of air line freeze ups
- Purge air for electronic cabinets
- Purge air for moisture sensitive coatings and adhesives

Features

- No moving parts
- Quiet
- Designed for point of use
- Continuous operation
- Differential pressure indicator (on selected models)
- Hollow fiber technology
- Non oxygen depleting membrane fibers

Advantages

- Nothing to wear out
- Can be installed anywhere
- Lightweight
- No waiting for media changeouts
- Indicates when filter element should be changed
- No electricity
- No U.L. approval required
- No refrigerants
- Low dewpoints
- Only water vapor molecules are allowed to pass through fiber walls

Benefits

- Less downtime
- Perfect for point-of-use applications
- Ease of installation
- Less downtime
- Dryer protection insurance
- Low operating cost
- OEM cost savings
- Environmentally friendly
- Prevents freezing
- Dryers can be used in medical, dental and breathing air applications

Height	22" (55.88 cm)
Port Size	1/4" NPT
Min./Max. Inlet Pressure	60/150 PSIG (4.1-10.3 bar)
Ambient/Inlet Temp. Range	40°-100° F (4.4°-37.8° C)
Purge Flow @ 100 PSI	0.5 SCFM (.85 NM ³ /H)

Pre-coalescer Part # HN1S-10CW
Replacement element: 10C10-025

Coalescer Part # HN1S-6CW
Replacement element: 6C10-025

Weight 5.2 lbs.
[2.36 kg]

Total Air Consumption = Purge Flow + Product Flow

Part Number FMD40-050

-40° F
Dewpoint
Dryers

Specifications:

Width	14" (35.56 cm)
Height	26" (66.04 cm)
Port Size	1/2" NPT
Min./Max. Inlet Pressure	60/150 PSIG (4.1-10.3 bar)
Ambient/Inlet Temp. Range	40°-100° F (4.4°-37.8° C)
Purge Flow @ 100 PSI	2 SCFM (3.4 NM ³ /H)
Pre-coalescer Part # Replacement element: 10C10-025	HN2S-10CW
Coalescer Part # Replacement element: 6C10-025	HN2S-6CW
Weight	13.3 lbs. (3.22 kg)

Total Air Consumption = Purge Flow + Product Flow

Part Number FMD40-100

-40° F
Dewpoint
Dryers

Specifications:

Width	14" (35.56 cm)
Height	38" (96.52 cm)
Port Size	1/2" NPT
Min./Max. Inlet Pressure	60/150 PSIG (4.1-10.3 bar)
Ambient/Inlet Temp. Range	40°-100° F (4.4°-37.8° C)
Purge Flow @ 100 PSI	2.5 SCFM (4.25 NM ³ /H)
Pre-coalescer Part # Replacement element: 10C10-050	HN2L-10CW
Coalescer Part # Replacement element: 6C10-050	HN2L-6CW
Weight	18.9 lbs. (8.57 kg)

Total Air Consumption = Purge Flow + Product Flow

Finite®

The **Finite**® Advantage...

High filtration efficiency, low operating costs, long life, high quality, and the convenience of purchasing your products from a single supplier are the **Finite® advantages.**

Each **Finite**® coalescing filter element offers our unique UNI-CAST design created from a carefully controlled vacuum process. This design was developed and patented by **Finite**® to optimize filter performance and results in a filter element with lower differential pressure and a higher dirt loading capacity. This means lower operating costs and longer life. Because we have complete control over the manufacture of our products, we also have control over our product's quality and performance.

This means reliable and consistent filtration performance for your applications.

Finite®'s filtration efficiency standards are among the highest in the industry. We have been careful to supply you a product that always meets and in most cases exceeds the filtration performance and

flow rate capacity of the original element. We verify these standards in our quality control laboratory. You are assured of getting a filter element with industry leading filtration quality.

Finite® is one of the pioneers in coalescing filtration. We are dedicated to the science of this filtration technique.

By purchasing a **Finite**® product you will have access to our many years of coalescing experience and research. With the breadth of our product line, including complete

filter housings, most of your needs will be met with a single source, high quality, reliable supplier.

Call your **Finite**® distributor now for your filtration needs. Or, your questions can be answered by calling 1-(800)-521-4357. Ask for Applications Engineering. **Finite**®'s benefits are available to you, now!

"You can have all of the benefits inherent in a **Finite**® filter element without the need to replace your existing filter housing."

General Notes:

1. To make a proper conversion, locate the original manufacturer's element number, determine the element type (coalescer, particulate or adsorber), then identify the **Finite**® equivalent from the proper manufacturer's list.

2. The grades and types of **Finite**® elements recommended are based on the actual performance specifications of the housings to be converted.

3. Number after "X" in "**Finite**® Element Part Number" indicates number of elements sold per Box. Elements are sold in Box quantity only.

4. Conversion kits consist of a group of parts, such as center rods and end caps, that adapt other manufacturer's housings to accept a **Finite**® conversion element.

5. Conversion kits are required for initial conversion only.

*Pore Structure Conversion Chart

Use this chart to determine the **Finite®** equivalent to the specified Zander grade.

Zander Media	Finite® Element
Designation	Grade
A	A (Adsorber)
V	3P (Particulate)
X	6C (Coalescer)
Y	8C (Coalescer)
Z	10C (Coalescer)

Example: Zander 2030X = **Finite®** 6CZ20-126 X 1

Accessories

Finite®

Finite's Featured Air Line Filtration Accessories

For a comprehensive list and to find out where these accessories are used, please see pages 184-185.

DPG-15HP Differential Pressure Gauge
Temp: 200°F (93°C)
Pressure: 800 PSIG (55 bar)

DPI-25 Differential Pressure Gauge
Temp: 200°F (88°C)
Pressure: 5000 PSIG (340 bar)
1/4" NPT Connections

DPI-13 Differential Pressure Indicator
Temp: 175°F (79°C)
Pressure: 250 PSIG (17 bar)
1/8" NPT Connections

KBDPI-25 Differential Pressure Gauge
Temp: 200°F (88°C)
Pressure: 250 PSIG (17 bar)
(Kit includes 1/8" and 1/4" NPT brass fittings, flexible nylon tubing and mounting bracket)

DPG-15 Differential Pressure Gauge
Temp: 175°F (79°C)
Pressure: 500 PSIG (34 bar)
(Fits on pre-drilled H-Series housings only)

MBS-1 Stainless Steel Mounting Bracket

KBDPG-15 Differential Pressure Gauge Kit
Temp: 200°F (93°C)
Pressure: 250 PSIG (17 bar)
(Kit includes 1/8" and 1/4" NPT brass fittings, flexible nylon tubing and mounting bracket)

Mounting Brackets

BK-M (1/4" to 1/2" NPT)
BK-3 (3/4" to 1" NPT)

K4520N14060, K4520N14160 Pressure Gauges
Temp: 125°F (52°C)
Pressure: 0-60 PSIG (0-4 bar),
0-160 PSIG (0-11 bar)

KV-2A, KV-5A, KV-6A Element Frame Kits
(Internally mounted in all ASME housings)

VS-50 Visual Sump Drain
Temp: 125°F (52°C)
Pressure: 150 PSIG (10 bar)
1/2" NPT Inlet Connection
1/8" NPT Drain Connection

MS-50 Metal Sump Drain (External)
Temp: 175°F (79°C)
Pressure: 10-250 PSIG (17 bar)
1/2" NPT Inlet Connection
1/8" NPT Drain Connection

TD-50 Adjustable Timed Drain Valve
Temp: 150°F (66°C)
Pressure: 600 PSIG (42 bar)
1/2" NPT Inlet and Outlet Connections

ADT-50 Float Actuated Drain Trap
Temp: 450°F (232°C)
Pressure: 150 PSIG (10 bar)
1/2" NPT Inlet Connection
1/4" NPT Drain Connection

ZLD-10 Zero Loss Drain
Temp: 35°-140°F (2°-60°C)
Pressure: 12-250 PSIG (0-17 bar)

ADS-50 Stainless Steel (304) Automatic Drain Trap
Temp: 450°F (232°C)
Pressure: 250 PSIG (17 bar)
1/2" NPT Inlet and Outlet Connections

TV-25 Timed Drain Valve
Temp: 230°F (110°C)
Pressure: 300 PSIG (20 bar)
1/4" NPT

TV-25-700 Timed Drain Valve
Temp: 210°F (99°C)
Pressure: 700 PSIG (48 bar)
1/4" NPT

TV-25-SS Timed Drain Valve (stainless steel)
Temp: 185°F (85°C)
Pressure: 200 PSIG (14 bar)
1/4" NPT

TV-50 Timed Drain Valve
Temp: 210°F (99°C)
Pressure: 300 PSIG (20 bar)
1/2" NPT

TV-50-SV Timed Drain Valve (built-in strainer valve)
Temp: 210°F (99°C)
Pressure: 300 PSIG (20 bar)
1/2" NPT

AD-12 Automatic Drain Valve (Internal)
Temp: 175°F (79°C)
Pressure: 10-250 PSIG (17 bar)
1/8" NPT Drain Connection

Where Used Chart

Use the chart below to find out what accessory can be used on what **Finite®** product. If you have any questions regarding accessories, please call our technical assistance department at 1-800-521-4357.

Model Number	Port (NPT)	Max Press. (PSIG)	Max Temp. (F)	Description	Where Used
Gauges					
BDPG-15	****	500	175	DPG-15 with mounting bracket.	H-Series
BDPI-13	1/8"	250	175	Differential pressure indicator with base and bracket.	H-Series
BDPI-25	****	5000	200	DPI-25 with mounting bracket.	ASME
BDPS-25	****	5000	200	DPS-25 with mounting bracket.	ASME
DPG-15	****	500	175	Differential pressure gauge.	H-Series
DPG-15HP	****	800	175	Differential pressure gauge.	M-Series
DPI-13	1/8"	250	175	Differential pressure indicator with base, 10 PSID - visual only.	H-Series
DPI-25	****	5000	200	2-1/2" dial, differential pressure gauge, range 0-10 PSID.	ASME
DPS-25	****	5000	200	DPI-25 above with SPST reed switch, 0.25 amp Maximum current.	ASME
KBDPG-15	****	250	200	DPG-15 Kit includes all fittings, tubing, and mounting bracket necessary for wall mounting, or to install gauge on ASME housing.	H-Series; ASME
KBDPI-13	1/8"	250	200	DPI-13 Kit w / fittings and tubing.	H-Series
KBDPI-25	****	250	200	DPI-25 Kit includes all fittings, tubing, and mounting bracket necessary for wall mounting, or to install gauge on ASME housing.	ASME
KBDPS-25	****	250	200	Kit includes all fittings, tubing, and mounting bracket necessary to install gauge on ASME housing.	ASME
KDPS	****	****	****	Reed Switch for DPG-15HP and KBDPG-15.	H-Series
2003	****	****	****	DPI-13 spare parts (cap screws, bracket, shell, spring, piston, diaphragm)	H-Series
2095	****	****	****	DPI hole block off kit. Blocks off DPI sensing port air flow if DPI is no longer desired.	H-Series
Drains					
AD-12	1/8" Female Pipe- Away	250	175	Float actuated automatic drain valve; point of use; non-emulsion liquids.	H-Series
ADS-50	1/2"	250	450	All stainless steel automatic drain trap rated at 120 gallons per hour with 0.10 orifice.	H-Series; ASME
ADT-50	1/2"	150	450	Float actuated automatic drain trap with S.S. internals.	H-Series; ASME
DL1-ADT50	1/4"	150	450	Float actuated automatic drain trap with S.S. internals.	W/ H-Series
DL1-TV25	1/4"	300	230	Timed solenoid drain valve; 6 ft. grounded power cord; Open Time: 1.2 sec - 2 min; Closed Time: 30 sec-45 min.	W/ H-Series
DL1-VS50	1/4"	150	125	Float actuated visual sump drain.	W/ H-Series
DL1-ZLD10	1/4"	250	140	Zero Loss Drain - 3600 scfm.	W/ H-Series
DL2-ADT50	1/2"	150	450	Float actuated automatic drain trap with S.S. internals.	W/ H-Series
DL2-TV50	1/2"	300	210	Timed solenoid drain valve; 6 ft. grounded power cord; Open Time: 1.2 sec - 2 min; Closed Time: 30 sec-45 min.	W/ H-Series
DL2-VS50	1/2"	150	125	Float actuated visual sump drain.	W/ H-Series
DL2-ZLD10	1/2"	250	140	Zero Loss Drain - 3600 scfm.	W/ H-Series
MS-50	1/2"	250	175	Metal sump with AD-12 installed.	H-Series; ASME
T-9	****	****	****	Timer; Open Time: 1-10 sec; Closed Time: 1-60 min; includes manual override auto/off switch.	H-Series; ASME

Model Number	Port (NPT)	Max Press. (PSIG)	Max Temp. (F)	Description	Where Used
TD-50	1/2"	600	150	Timed drain valve; motorized S.S. ball valve; 8 ft. grounded power cord; bronze body; 120V AC; 60Hz; Open Time: 5 seconds; Closed Time: 1-50 minutes.	H-Series; ASME
TV-25	1/4"	300	230	Timed solenoid drain valve; 6 ft. grounded power cord; Open Time: 0.5 sec - 10 sec; Closed Time: 30 sec-45 min.	H-Series; ASME
TV-25-700	1/4"	700	210	High Pressure Timed solenoid drain valve; 6 ft. grounded power cord; brass body; ruby plunger seal; Open Time: 0.5 sec - 10 sec; Closed Time: 30 sec-45 min.	H-Series; ASME
TV-25-SS	1/4"	200	185	Timed solenoid drain valve; 6 ft. grounded power cord; stainless steel body; Open Time: 0.5 sec - 10 sec; Closed Time: 30 sec-45 min.	H-Series; ASME
TV-50	1/2"	300	210	Timed solenoid drain valve; 6 ft. grounded power cord; Open Time: 0.5 sec - 10 sec; Closed Time: 30 sec-45 min.	H-Series; ASME
TV-50-SV	1/2"	300	210	Timed solenoid drain valve with strainer; 6 ft. grounded power cord; Open Time: 0.5 sec - 10 sec; Closed Time: 30 sec - 45 min.	H-Series; ASME
VS-50	1/2"	150	125	Float actuated visual sump drain.	H-Series; ASME
2160	****	****	****	240 V Coil Kit and Cord Set for TV-25/TV-50	TV-25/TV-50
2161	****	****	****	Coil only for TV-25/TV-50	TV-25/TV-51
23002	****	****	****	1/2" NPT Ball Valve w/plate (Replacement valve for old TD-50)	TD-50
23105	****	****	****	1/4" NPT STRAINER FOR TV-25	TV-25
23106	****	****	****	1/2" NPT STRAINER FOR TV-50	TV-50
ZLD-10	1/2"	250	140	Zero Loss Drain - 3600 scfm.	H-Series; ASME
ZLD-AV	1/2"	250	140	Vent adaptor for ZLD-10 and ZLD-20.	H-Series; ASME
ZLD-RK	****	****	****	Service kit for ZLD-10 and ZLD-20.	H-Series; ASME
2158	****	****	****	Drain Kit for QN*N	QN*N
Mounting Brackets/Adaptor Kits					
BK-3	****	****	****	Mounting bracket for 3/4" and 1" H-Series & M-Series housings.	H-Series; M-Series
BK-M	****	****	****	Mounting bracket for H-Series housings up to 1/2" NPT; FFC-110 and FFC-110L	H-Series; FFC-110
DF-1	1/8"-1/2"	****	****	Drain Fitting Adaptor for MS-50, ZLD-10, and ZLD-20.	H-Series
EBD-12	1/8"	****	****	Brass drain bushing kit--Fits all H-Series and older models.	H-Series
ESD-12	1/8"	****	****	Stainless Steel drain bushing kit; Fits all H-Series and older models.	H-Series
KV-2A	****	****	****	Element frame kit (Element: 51-280).	ASME
KV-2SA	****	****	****	Element frame kit (Element: 51-280), stainless steel	ASME
KV-5A	****	****	****	Element frame kit (Element: 85-250).	ASME
KV-5SA	****	****	****	Element frame kit (Element: 85-250), stainless steel	ASME
KV-6A	****	****	****	Element frame kit (Element: 85-360).	ASME
KV-6SA	****	****	****	Element frame kit (Element: 85-360), stainless steel	ASME
MB-2	****	****	****	Steel Mounting Bracket for P1N Housing & M-Series (1/4"-1/2" NPT)	Instrumentation; M-Series
MB-2S	****	****	****	Steel Mounting Bracket for FFC-112 Housing	Instrumentation
MBS-1	****	****	****	SS Mounting Bracket for S1R, S5R, A1R, A5R and FFC-116 Housings	Instrumentation
MBS-2	****	****	****	Stainless Steel (SS) Mounting Bracket for KN*S, P1N, SM-Series, S*PS, S*PL, S*SS, S*SL	Instrumentation

Oil and Water Indicators

Bulletin 1300 - 650/USA

Find out if you have oil or water in your compressed air lines!

Finite's new disposable indicators are an easy way to detect the presence of liquid (water or oil) in a compressed air system. The indicators will change from white to red when the respective liquid is present and provides peace-of-mind for critical applications throughout a facility.

KSDS-W: Detects liquid water.

KSDS-O: Detects liquid oil.

Specifications:

Part Number	Connection Size	Max. Pressure	Max. Temp.	Exhaust Flow @ 100 PSIG	Length	Replacement Element
KSDS-W	1/8" NPT	100 PSIG	125° F	0.16 SCFM	4.37 in.	SDN-W
KSDS-O	1/8" NPT	100 PSIG	125° F	0.16 SCFM	4.37 in.	SDN-O

Installation:

Liquid (water or oil) indicators should be installed throughout a facility at all critical point-of-use applications. They should be connected to the main compressed air line via an 1/8" NPT port, in an area with adequate visibility. Indicators should be located downstream of a coalescing filter and upstream of a point-of-use piece of equipment.

Z-Series

Finite® Z-Series electronic condensate drains are designed for economical removal of unwanted water, oil emulsions and other liquids.

How it works:

The **Finite®** Z-Series Zero Loss Drain (ZLD-10) operates with most common supply voltages: 24 to 230V_{dc}, and 80 to 230 V_{ac}, automatically adjusting to the input voltage. As condensate collects in the internal sump, a diaphragm is held closed by the system pressure. When the liquid level sensor detects an accumulation of condensate, an electromagnet is activated, relieving the system pressure above the diaphragm, allowing condensate to escape. As the condensate level decreases, system pressure is re-introduced above the diaphragm, closing off the flow of waste liquid before compressed air can escape.

The ZLD should be cleaned annually to ensure long-term reliability. Please consult factory for cleaning instructions.

RESULT: Zero loss of expensive compressed air, which results in lower overall operating cost!

Installation

Installation is simple and quick: a ½" NPT pipe adapter (supplied) is threaded into a filter housing drain port, a drip leg, or other pipe connection, and the ZLD drains can then be fitted into the system with the simple twist of a threaded collar.

Finite's ZLD-10

Capacity Range

The ZLD condensate drains are suitable for use on compressed air systems. Rated flow for filters is 3600 SCFM/6116 NM³/H for the ZLD-10.

Zero Loss Drain Features

- Automatically adjusts to all common power sources 24V to 230V
- Conserves compressed air energy, zero compressed air is expelled with the oil/water condensate
- Comes with adapters for NPT threading which enables easy installation at no additional cost
- Condensate entry from top or bottom of drain simplifies difficult installations
- Test button for manual discharge
- Internal electronics continuously monitor operation, and alarm light on front panel indicates faults
- Adapter vent for remote mounting and pressure balancing is available separately

Drawings, Dimensions & Specifications

Dimension Chart
in Inches (cm)

ZLD-10	
A	5.7" (14.5)
B	.57" (1.4)
C	3.5" (8.9)
D	5.2" (13.2)

Specifications

Maximum Compressor Performance	360 SCFM (612 NM ³ /H)
Maximum Refrigerated Dryer Performance	720 scfm (1224 NM ³ /H)
Maximum Filter Capacity	3600 SCFM (6120 NM ³ /H)
Pressure Range	12-250 PSI (0.8 - 17 bar)
Power Supply	24-230 V _{DC} , self regulating 80-230 V _{AC} , self regulating
Power Consumption	5 VA
Potential-Free Alert Contact	Max. 300 V AC/DC, Max. 0,1 A (electric relays)
Temperature Range	35°F to 140°F (2°C to 60°C)
Protection	NEMA 4X or IP 65
Weight (Empty)	2.2 lbs. (1 kg.)

Materials

Wetted Plastic Parts	High impact glass filled engineered plastic
Body	Coated Aluminum
Seals	Viton®

Repair Kit

Repair Kit (includes springs, o-rings, and other seals)	ZLD-RK

Finite® Accessories - Drip Leg Kit

Bulletin 1300 - 155/USA

Every compressed air system is faced with the problem of free water, water aerosols and water vapor.

This contamination can cause components such as valves, cylinders, and air motors to fail prematurely. In addition, water can carry rust and pipe scale into critical components causing them to plug. While air dryers are the best solution for ridding a system of water, they may be too costly or difficult to install for some point-of-use applications. A very reliable alternative to an air dryer is the combination of Finite's new Drip Leg Kits and coalescing filters. This combination efficiently removes both free water and water aerosols, providing you with an economical solution for all of your point-of-use applications.

Automatic Drain Trap

DL1-ADT50 (1/4" NPT)

DL2-ADT50 (1/2" NPT)

This automatic drain trap is ideal for highly contaminated systems.

- Pressure to 150 PSIG
- Temperature to 450°F
- 1/4" or 1/2" NPT Connections
- Kit includes fittings, ball valve, and ADT-50 drain

Timed Solenoid Drain Valve

DL1-TV25 (1/4" NPT)

DL2-TV50 (1/2" NPT)

This timed solenoid drain valve is ideal when you want to vary the drain frequency.

- Pressure to 250 PSIG
- Temperature to 230°F (TV-25)
210°F (TV-50)
- 1/4" or 1/2" NPT Connections
- Kit includes fittings, ball valve, and timed solenoid drain

Visual Sump Drain

DL1-VS50 (1/4" NPT)

DL2-VS50 (1/2" NPT)

This visual sump drain is ideal when visual inspection is required.

- Pressure to 150 PSIG
- Temperature to 125°F
- 1/4" or 1/2" NPT Connections
- Kit includes fittings, ball valve, and VS-50 drain

Zero Loss Drain

DL1-ZLD10 (1/4" NPT)

DL2-ZLD10 (1/2" NPT)

This zero loss drain is ideal for conserving compressed air energy.

- Pressure to 250 PSIG
- Temperature to 140°F
- 1/4" or 1/2" NPT Connections
- Kit includes fittings, ball valve, and ZLD drain

Finite® Accessories - Drip Leg Kit

Applications Include: • Compressor/Dryer Installations • Water Removal • Air Blow-offs
• Point-of-use Pneumatic Applications • All Air Drops • New Equipment Installations

Common Point-of-Use Application:

Q.

“What filter housing do I need for my compressed air/gas application?”

a.

Ask your customer to explain their application/operating system. If the customer is operating at standard operating conditions (100 PSIG and 70°F) use the Housing Selection Chart on the next page to find the correct filter housing.

If not, ask your customer questions 1-5. Use this information to convert their system conditions to standard conditions by using the equation below. Then use this flow to find the correct filter housing in the Housing Selection Chart on the next page.

1. What type of gas are you filtering?

2. What is the flow rate (SCFM)?

3. What is the pressure (PSIG)?

4. What is the temperature (°F)?

5. What type of filtration is required (efficiency, type of contamination, etc.)?
See next page for Media Specifications Charts.

Gas	Specific Gravity
Air	1
Ammonia	0.58
Argon	1.37
Carbon Dioxide	1.52
Carbon Monoxide	0.96
Chlorine	2.48
Ethane	1.04
Ethylene	0.97
Helium	0.13
Hexane	2.73
Hydrogen	0.06
Methane	0.55
Natural Gas	0.66
Neon	0.69
Nitrogen	0.96
Oxygen	1.18
Pentane	2.47
Propane	1.56

Refer to this chart if you do not know the specific gravity of the gas you are filtering.

Equation:

$$\begin{array}{c} \text{Flow Rate:} \\ \text{Actual System} \\ \text{Flow Rate} \\ \text{(SCFM)} \end{array} \times \begin{array}{c} \text{Pressure:} \\ \frac{(100 \text{ PSIG} + 14.7 \text{ PSIG})}{(\text{System Pressure (PSIG)} + 14.7 \text{ PSIG})} \end{array} \times \begin{array}{c} \text{Temperature:} \\ \frac{(\text{System Temp. } ^\circ\text{F} + 460^\circ\text{F})}{530^\circ\text{F}} \end{array} \times \begin{array}{c} \text{Specific Gravity:} \\ \sqrt{\text{Specific Gravity}} \end{array} = \begin{array}{c} \text{Adjusted} \\ \text{Flow Rate:} \\ \text{SCFM} \\ \text{@ 100 PSIG,} \\ \text{70}^\circ\text{F} \end{array}$$

Example:

$$136 \text{ SCFM} \times \frac{(100 \text{ PSIG} + 14.7 \text{ PSIG})}{(150 \text{ PSIG} + 14.7 \text{ PSIG})} \times \frac{(100^\circ\text{F} + 460^\circ\text{F})}{530^\circ\text{F}} \times \sqrt{1} = 100 \text{ SCFM}$$

Practice:

$$\begin{array}{c} \text{Flow Rate:} \\ \text{ } \end{array} \times \begin{array}{c} \text{Pressure:} \\ \text{ } \end{array} \times \begin{array}{c} \text{Temperature:} \\ \text{ } \end{array} \times \begin{array}{c} \text{Specific Gravity:} \\ \sqrt{\text{ }} \end{array} = \begin{array}{c} \text{Adjusted} \\ \text{Flow Rate:} \\ \text{ } \end{array}$$

Note: _ is a placeholder to put in your port type. N = NPT, S = SAE, F = BSPF, T = BSPT

How to Use the Housing Selection Charts:

1. Find the grade your application requires, see Media Specification Chart.
2. Locate the grade in the Housing Selection Chart and find your flow.
3. Find the corresponding Housing Assembly.

H-Series Media Specification Chart

Offer of Sale

The items described in this document are hereby offered for sale at prices to be established by Parker Hannifin Corporation, its subsidiaries and its authorized distributors. This offer and its acceptance by any customer ("Buyer") shall be governed by all of the following Terms and Conditions. Buyer's order for any item described in its document, when communicated to Parker Hannifin Corporation, its subsidiary or an authorized distributor ("Seller") verbally or in writing, shall constitute acceptance of this offer.

1. Terms and Conditions of Sale: All descriptions, quotations, proposals, offers, acknowledgments, acceptances and sales of Seller's products are subject to and shall be governed exclusively by the terms and conditions stated herein. Buyer's acceptance of any offer to sell is limited to these terms and conditions. Any terms or conditions in addition to, or inconsistent with those stated herein, proposed by Buyer in any acceptance or an offer by Seller, are hereby objected to. No such additional, different or inconsistent terms and conditions shall become part of the contract between Buyer and Seller unless expressly accepted in writing by Seller. Seller's acceptance of any offer to purchase by Buyer is expressly conditional upon Buyer's assent to all the terms and conditions stated herein, including any terms in addition to, or inconsistent with those contained in Buyer's offer. Acceptance of Seller's products shall in all events constitute such assent.

2. Payment: Payment shall be made by Buyer within 30 days from the date of shipment. Amounts not timely paid shall bear interest at the Maximum rate permitted by law for each month or portion thereof that the Buyer is late making payment. Any claims by Buyer for omissions or shortages in a shipment shall be waived unless Seller receives notice thereof within 30 days after Buyer's receipt of the shipment.

3. Delivery: Unless otherwise provided on the face hereof, delivery shall be made F.O.B. Seller's plant. Regardless of the method of delivery, however, risk of loss shall pass to Buyer upon Seller's delivery to a carrier. Any delivery dates shown are approximate only and Seller shall have no liability for any delays in delivery.

4. Warranty: Seller warrants that the items sold hereunder shall be free from defects in material or workmanship for a period of 18 months from date of shipment to Buyer. THIS WARRANTY COMPRISES THE SOLE AND ENTIRE WARRANTY PERTAINING TO ITEMS PROVIDED HEREUNDER. SELLER MAKES NO OTHER WARRANTY, GUARANTEE, OR REPRESENTATION OF ANY KIND WHATSOEVER. ALL OTHER WARRANTIES, INCLUDING BUT NOT LIMITED TO, MERCHANTABILITY AND FITNESS FOR PURPOSE, WHETHER EXPRESS, IMPLIED, OR ARISING BY OPERATION OF LAW, TRADE USAGE, OR COURSE OF DEALING ARE HEREBY DISCLAIMED.

NOTWITHSTANDING THE FOREGOING, THERE ARE NO WARRANTIES WHATSOEVER ON ITEMS BUILT OR ACQUIRED WHOLLY OR PARTIALLY, TO BUYER'S DESIGNS OR SPECIFICATIONS.

5. Limitation of Remedy: SELLER'S LIABILITY ARISING FROM OR IN ANY WAY CONNECTED WITH THE ITEMS SOLD OR THIS CONTRACT SHALL BE LIMITED EXCLUSIVELY TO REPAIR OR REPLACEMENT OF ITEMS SOLD OR REFUND OF THE PURCHASE PRICE PAID BY BUYER, AT SELLER'S SOLE OPTION. IN NO EVENT SHALL SELLER BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES OF ANY KIND OR NATURE WHATSOEVER, INCLUDING BUT NOT LIMITED TO LOST PROFITS ARISING FROM OR IN ANY WAY CONNECTED WITH THIS AGREEMENT OR ITEMS SOLD HEREUNDER, WHETHER ALLEGED TO ARISE FROM BREACH OF CONTRACT, EXPRESS OR IMPLIED WARRANTY, OR IN TORT, INCLUDING WITHOUT LIMITATION, NEGLIGENCE, FAILURE TO WARN OR STRICT LIABILITY.

6. Changes, Reschedules and Cancellations: Buyer may request to modify the designs or specifications for the items sold hereunder as well as the quantities and delivery dates thereof, or may request to cancel all or part of this order, however, no such requested modification or cancellation shall become part of the contract between Buyer and Seller unless accepted by Seller in a written amendment to this agreement. Acceptance of any such requested modification or cancellation shall be at Seller's discretion, and shall be upon such terms and conditions as Seller may require.

7. Special Tooling: A tooling charge may be imposed for any special tooling, including without limitation, dies, fixtures, molds and patterns, acquired to manufacture items sold pursuant to this contract. Such special tooling shall be and remain Seller's property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in apparatus

belonging to Seller which is utilized in the manufacture of the items sold hereunder, even if such apparatus has been specially converted or adapted for such manufacture and notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller shall have the right to alter, discard or otherwise dispose of any special tooling or other property in its sole discretion at any time.

8. Buyer's Property: Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer's property, may be considered obsolete and may be destroyed by Seller after two (2) consecutive years have elapsed without Buyer placing an order for the items which are manufactured using such property. Seller shall not be responsible for any loss or damage to such property while it is in Seller's possession or control.

9. Taxes: Unless otherwise indicated on the face hereof, all prices and charges are exclusive of excise, sales, use, property, occupational or like taxes which may be imposed by any taxing authority upon the manufacture, sale or delivery of the items sold hereunder. If any such taxes must be paid by Seller or if Seller is liable for the collection of such tax, the amount thereof shall be in addition to the amounts for the items sold. Buyer agrees to pay all such taxes or to reimburse Seller therefore upon receipt of its invoice. If Buyer claims exemption from any sales, use or other tax imposed by any taxing authority, Buyer shall save Seller harmless from and against any such tax, together with any interest or penalties thereon which may be assessed if the items are held to be taxable.

10. Indemnity For Infringement of Intellectual Property Rights: Seller shall have no liability for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights except as provided in this Part 10. Seller will defend and indemnify Buyer against allegations of infringement of U.S. patents, U.S. trademarks, copyrights, trade dress and trade secrets (hereinafter 'Intellectual Property Rights'). Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on an allegation that an item sold pursuant to this contract infringes the Intellectual Property Rights of a third party. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If an item sold hereunder is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at its sole expense and option, procure for Buyer the right to continue using said item, replace or modify said item so as to make it noninfringing, or offer to accept return of said item and return the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller shall have no liability for claims of infringement based on information provided by Buyer, or directed to items delivered hereunder for which the designs are specified in whole or part by Buyer, or infringements resulting from the modification, combination or use in a system of any item sold hereunder. The foregoing provisions of this Part 10 shall constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights.

If a claim is based on information provided by Buyer or if the design for an item delivered hereunder is specified in whole or in part by Buyer, Buyer shall defend and indemnify Seller for all costs, expenses or judgments resulting from any claim that such item infringes any patent, trademark, copyright, trade dress, trade secret or any similar right.

11. Force Majeure: Seller does not assume the risk of and shall not be liable for delay or failure to perform any of Seller's obligations by reason of circumstances beyond the reasonable control of Seller (hereinafter 'Events of Force Majeure'). Events of Force Majeure shall include without limitation, accidents, acts of God, strikes or labor disputes, acts, laws, rules or regulations of any government or government agency, fires, floods, delays or failures in delivery of carriers or suppliers, shortages of materials and any other cause beyond Seller's Control.

12. Entire Agreement/Governing Law: The terms and conditions set forth herein, together with any amendments, modifications and any different terms or conditions expressly accepted by Seller in writing, shall constitute the entire Agreement concerning the items sold, and there are no oral or other representations or agreements which pertain thereto. This Agreement shall be governed in all respects by the law of the State of Ohio. No actions arising out of the sale of the items sold hereunder or this Agreement may be brought by either party more than two (2) years after the cause of action accrues.

About Parker Hannifin Corporation

With annual sales exceeding \$8 billion, Parker Hannifin is the world's leading diversified manufacturer of motion and control technologies and systems, providing precision-engineered solutions for a wide variety of commercial, mobile, industrial and aerospace markets.

The company employs more than 50,000 people in 46 countries around the world. Parker has increased its annual dividends paid to shareholders for 49 consecutive years, among the top five longest-running dividend-increase records in the S&P 500 index.

For more information, visit the company's web site at <http://www.parker.com>, or its investor information site at <http://www.phstock.com>.

- ▶ Fuel manifolds
- ▶ Inert/oxygen generating systems
- ▶ Electromechanical actuation
- ▶ Couplings & valve fittings
- ▶ Hoses & rigid tubes

AUTOMATION

- ▶ Pneumatic valves
- ▶ Linear motors
- ▶ Air preparation units
- ▶ Stepper & servo drives, controls
- ▶ Positioning tables
- ▶ Electric & pneumatic actuators
- ▶ Structural extrusions
- ▶ Vacuum products
- ▶ Pressure sensors
- ▶ Pneumatic logic
- ▶ Human-machine interface
- ▶ Gantry robots
- ▶ Multi-axis motion control products

CLIMATE & INDUSTRIAL CONTROLS

- ▶ Refrigeration & general-purpose solenoid valves
- ▶ Flow controls
- ▶ Pressure regulators
- ▶ Check, ball, shut-off & service valves
- ▶ Spun copper components
- ▶ Value-added assemblies
- ▶ Thermostatic & electronic expansion valves
- ▶ Accumulators, filter dryers & receivers
- ▶ Heater/air conditioning hose & hose assemblies
- ▶ Gerotors
- ▶ Process control valves

FILTRATION

- ▶ Hydraulic, lubrication & coolant filters
- ▶ Process, chemical, water & microfiltration filters
- ▶ Compressed air & gas purification filters
- ▶ Lube oil & fuel filters
- ▶ Fuel-conditioning systems
- ▶ Fuel filters/water separators
- ▶ Condition monitoring
- ▶ Aviation fuel filters
- ▶ Analytical gas generators
- ▶ Compressed air separation systems
- ▶ Nitrogen, hydrogen & zero air generators
- ▶ Engine air, fuel, oil filtration & systems

FLUID CONNECTORS

- ▶ Rubber & thermoplastic hose
- ▶ Industrial hose
- ▶ Tube fittings & adapters
- ▶ Tubing & plastic fittings
- ▶ Brass fittings & valves
- ▶ Hose couplings
- ▶ Quick disconnects
- ▶ Check valves
- ▶ Expert systems
- ▶ Custom couplings & fittings

HYDRAULICS

- ▶ Hydraulic cylinders
- ▶ Accumulators
- ▶ Rotary actuators
- ▶ Hydraulic and lube oil filters
- ▶ Hydraulic valves
- ▶ Hydraulic motors & pumps
- ▶ Hydrostatic steering
- ▶ Power units
- ▶ Electrohydraulic systems
- ▶ Metering pumps
- ▶ Integrated hydraulic circuits
- ▶ Power take-offs

INSTRUMENTATION

- ▶ Medium/high pressure fittings & valves
- ▶ Instrumentation fittings
- ▶ High-purity fittings, diaphragm valves & regulators
- ▶ Instrumentation ball, plug, needle, check & manifold valves
- ▶ Diaphragm & bellows valves
- ▶ PFA & PTFE fittings, valves, pumps & regulators
- ▶ Regulators & transducers
- ▶ CGA gas cylinder connections
- ▶ Analytical solutions

SEAL

- ▶ Elastomeric O-rings
- ▶ Homogeneous & inserted elastomeric shapes & diaphragms
- ▶ Metal & plastic retained composite seals
- ▶ Polymeric & plastic dynamic seals
- ▶ Rubber & plastic boots/bellows
- ▶ Extruded & precision-cut/fabricated elastomeric seals
- ▶ Thermoplastic engineered seals
- ▶ EMI shielding/grounding devices
- ▶ Thermal management products

Filtration Group Manufacturing & Technical Service Locations

Engine and Fuel Filtration

Racor Division

Modesto, CA
209-521-7860

Beaufort, SC
Holly Springs, MS

Parker Hannifin UK Ltd.
Dewsbury, West Yorkshire
England
+44 (0) 1924 487000

Jacarei, Brazil
+55 (11) 3917 1222

Seoul, Korea
+82 2 559 0400

Hydraulic and Lube Oil Filtration

Hydraulic Filter Division

Metamora, OH
419-644-4311

Thetford, Norfolk England
+44 (0) 1842 763299

Urpala As. Finland
+358 (0) 3 54100

Arnhem, Netherlands
+31 (0) 26 3760376

Compressed Air/Gas Filtration and Generation Products

Filtration and Separation Division

Haverhill, MA
978-858-0505

Baltimore, MD

Oxford, MI
248-628-6400

Maidstone, England
